THE

DECENNIAL CENSUS OF THE COMMONWEALTH.

1885.

INTRODUCTION.

The Legislature ordered Censuses of the people in 1837, 1840, and 1850. The regular decennial enumeration of the inhabitants, in accordance with constitutional provisions, was begun in 1855, and has been continued since that period, the present being the fourth constitutional enumeration of the people.

In 1837 the State authorized the collection of industrial statistics. Such statistics were collected in 1837, 1845, 1855, 1865, and 1875, the collection in 1885 being the sixth Census of the Industries of the Commonwealth. Since 1855, therefore, the collection of industrial statistics, and the constitutional enumeration of the people, taken together, have constituted the Decennial Census of the Commonwealth.

It has been usual for the Legislature, the year prior to the Decennial Census, to pass a special bill relative to the matter to be incorporated in the schedules and to the methods to be employed in collecting the required information.

In the general introduction to the Census report of 1875, the progress of the Census, so far as the law is concerned, was fully described and need not be repeated here.

The principal provisions of Chapter 181 of the Acts of 1884, under which the Census of 1885 was taken, are as follows:

SECTION 1. The decennial census of the Commonwealth required by articles twenty-one and twenty-two of the amendments to the Constitution, and the decennial census of the industries of the Commonwealth, shall be taken in the year eighteen hundred and eighty-five and in every tenth year thereafter, under the direction of the bureau of statistics of labor, by enumerators to be appointed by said bureau as hereinafter provided.

SECT. 2. The information sought by the census shall be gathered on eight general schedules, as follows: — Schedule number one shall relate to population and social statistics; Schedule number two to manufactures; Schedule number three to mining and quarrying; Schedule number four to agricultural products and property and to domestic manufactures; Schedule number five to the fisheries; Schedule number six to commerce; Schedule number seven to libraries; and Schedule number eight to schools and school property. The inquiries to be borne upon such schedules shall be framed by the bureau of statistics of labor upon the basis of the schedules adopted for the census of eighteen hundred and seventy-five, and shall be submitted to the governor and council for their approval, and when approved by them shall constitute the schedules of the census, and said schedules shall contain no other inquiries than those receiving the approval of the governor and council.

SECT. 3. The information to be gathered on schedule number one shall relate to each person residing in the Commonwealth on the first day of May, and by such schedule there shall be made a special enumeration of the legal voters residing in each city and town and each ward in each city in the Commonwealth. The statistics to be gathered by schedules number two, number three, number five, number six, number seven and number eight shall relate to the facts called for on the same for the year ending the thirtieth day of June of each census year, and so far as property relating to such facts is concerned as it exists on the said thirtieth day of June; and the statistics to be gathered by means of schedule number four shall relate to agricultural products and domestic manufactures for the year ending the fifteenth day of November of the census years, and to agricultural property as it exists on the said fifteenth day of November of said years.

SECT. 4. For the purpose of securing the information called for by the preceding sections, said bureau shall appoint census enumerators in each city and town in the Commonwealth, but the whole number of such enumerators shall not exceed one for every fifteen hundred polls in each city and town, according to the returns of the assessors for city and town purposes for the year immediately preceding the taking of the census, and shall be as many less as said bureau may decide to be adequate for the duty: *provided*, that for the enumeration of the inhabitants as provided for by schedule number one at least one person shall be appointed and compensated in each city and town; *and provided, further*, that each person appointed as an enumerator shall be an inhabitant of the city or town in which said person is to perform the duty required; and the appointment of such enumerators shall be approved by the mayor and aldermen of the city, or the selectmen of the town; said bureau may appoint in addition to the enumerators provided for in this section, special enumerators to a number not exceeding ten, for the purpose of making special investigations into the conditions of the dependent, defective and delinquent classes.

* * * * * * * * *

SECT. 11. The said bureau, after it shall have gathered the facts as called for by this act, shall cause to be prepared and printed true abstracts of the same, with proper analysis, for the use of the legislature, and such abstracts shall be printed in volumes uniform in style with the reports on the census of Massachusetts for the year eighteen hundred and seventy-five, and such reports shall be stereotyped, but in the reports so required no use shall be made of the names of individuals, firms or corporations supplying the information called for by this act, such information being deemed confidential, and not for the purpose of disclosing any person's affairs, and any enumerator or employé of said bureau violating this provision, shall be fined as provided for in the succeeding section for wilful deceit and falsehood.

SECT. 12. If an enumerator or agent appointed under this act wilfully refuses to perform any duty required of him in accordance therewith, he shall forfeit a sum not exceeding five hundred dollars, and if he is guilty of wilful deceit or falsehood in the discharge of his duties, he shall forfeit a sum not exceeding two thousand dollars, or be imprisoned for not more than one year, and if any person shall refuse to give the information required by this act to a person authorized to collect the same, he shall pay a fine not exceeding one hundred dollars for every such refusal.

* * * * * * * * *

In addition to the foregoing general provisions, the printing and binding of 8,000 copies of the reports on the Decennial Census are provided for by Chapter 38 of the Resolves for 1885: the same to be in octavo volumes of the size of the Acts and Resolves, but in the same style as the reports of the Bureau of Statistics of Labor; and further, that the matter thereof be contained in three volumes, each volume to contain so far as practicable information of the same class. The same resolve also provided for the printing and binding of a compendium in one volume. The results, therefore, of the Census of 1885 will be contained in three volumes, namely, Volume I. (in two parts) containing all statistics in regard to the population; Volume II. relating to manufactures, the fisheries, and commerce; and Volume III. comprehending agricultural products and property, mines, pits, and quarries. These subjects conform generally to the contents of the volumes on the Census of 1875. Each volume will contain an analysis appropriate to the statistics printed therein, and also matter of special significance relating to the contents.

The schedules for the collection of statistics were approved by the Governor and Council, in accordance with the Act of 1884, as follows:

Schedule No. 1, relating to Population and Social Statistics, March 8, and 18, 1885;

Schedule No. 2, relating to Manufactures, July 16, and October 1, 1885;

Schedule No. 3, relating to Mines, Pits, Quarries, etc., September 1, 1885;

Schedule No. 4, relating to Domestic Manufactures, Agricultural Products and Property, March 18, 1885;

Schedule No. 5, relating to The Fisheries, December 2, 1885;

Schedule No. 6, relating to Commerce, September 1, 1885;

Schedule No. 7, relating to Libraries and Reading Rooms, September 1, 1885;

Schedule No. 8, relating to Public Schools, Colleges, Academies, and other Private Schools, and School Property, September 1, 1885.

These schedules comprehended but very little matter not incorporated in the schedules of prior censuses; the chief feature of departure, which distinguished them from schedules of other periods, being the division and subdivision of inquiries, in order to prevent compound answers. Such features, however, will be specifically pointed out in the analysis for each volume.

The enumeration commenced promptly on the first day of May, 1885. The State was divided into 526 districts for the enumeration of the population, and the same number of enumerators were commissioned. Various changes, through declinations and resignations, were made, resulting in the establishment of 44 subdistricts, some of the original districts proving too large to be canvassed in any reasonable time. The whole number of enumerators serving at different times in the enumeration of the population was 570.

The number of enumerators engaged in collecting the statistics of agriculture was 210, the State being divided into that number of districts.

The industrial statistics have been collected by mail, and by experts appointed as special agents.

The total expense per capita of the entire field work of the Census, including all branches of the enumeration, is $4\frac{82}{100}$ cents for 1885, while for 1875 it was $5\frac{10}{100}$ cents per capita.

The total expense of the Census, including all enumerations, printing of schedules, rent, clerical force, and all items other than the printing of the reports, for 1885, is $9\frac{47}{100}$ cents per capita of the total population, while in 1875 the total expense per capita was $8\frac{71}{100}$ cents; the present Census costing, therefore, $\frac{76}{100}$ of a cent more per capita than the Census of 1875; the labor involved, however, has been at least double that of the former period, and the results of far greater value than those of the Census of ten years ago. The specific features of the increased value will be brought out in their proper places.

The clerical force, with the exception of clerks employed in the bureau before the Civil Service Act went into effect, has been taken under the rules of the Civil Service Commission, and in accordance with their examinations. It is greatly to the credit of the examinations conducted by the board, that the force employed on the Census has been superior as a whole to any clerical force ever employed by the bureau. The clerks certified to this office have been uniformly more skilled and competent than those obtained under the old system, and testimony is cheerfully given in favor of the practical working of the system used under the Civil Service law. The experts, or special agents, have been exempt from such regulations, the number employed varying, the highest number at any one time being 10. The highest number of clerks employed at any one time was 74. The number of employés in the bureau, connected with Census work, between June, 1885, and January, 1887, has been, on an average, 68 per month.

If the civil service regulations could be extended to enumerators, great good would result. If such rules cannot be applied to govern future appointments, there should be some stringent provision of law to prevent selectmen of towns and mayors and aldermen of cities from recommending incompetent men for enumerators. By law, the Bureau of Statistics of Labor must appoint men approved by the selectmen of towns and mayors and aldermen of cities. The accuracy and success of the enumeration depends largely upon the capacity and integrity of the body of enumerators. As a whole, the men selected for this work have been of good character, and proper attainments, but in a few instances, and the temptation to mention the towns and cities involved is very great, men were selected who proved unfit for any duty requiring care and integrity.

Local officers of towns and cities who have not pride enough in the good standing of their own municipalities to furnish the Commonwealth with the best men available for the service of the Census, but who sacrifice duty to the public for the sake of paying political debts, or for giving employment to some object of charity, should not be continued in office. It should be stated, further, that in every instance where inefficient men have been employed, through the recommendations of local officers made in accordance with law, the bureau has been able to detect the bad work, and supplement it either by re-enumeration or by careful corrections, so that such instances have caused no injurious results as regards the accuracy of the whole enumeration, which I deem more trustworthy in every respect than any preceding enumeration.

The working force of the office has been under the charge of very efficient officers, as follows:

Charles F. Pidgin, . .	First Clerk, and Executive Officer;
William C. Hunt, . .	Second Clerk, and Chief of Division of Results (tabular presentations);
Robert T. Swan, . . .	Chief of Divisions of Enumeration and of Agriculture;
Frank H. Drown, . .	Chief of Divisions of Mailing and of Manufactures, the Fisheries, and Commerce;
Charles R. Prescott, .	Special Agent, Chief of Divisions of Special Agents and of Correspondence;
Horace G. Wadlin, . .	Chief of Division of Libraries and Schools;
Clarence Dow, . . .	Chief of Division of Population and Social Statistics.

To these gentlemen I am greatly indebted. Their faithfulness, their willingness to serve the Commonwealth in and out of season, and their intelligence, have made the Census a success. While the warmest thanks are due to each and every one of them, as well as to the enumerators, special agents, and the clerical force, the Commonwealth is under the greatest obligation to the Executive Officer for his indefatigable efforts to secure success. Through his inventive genius the bureau has been able to adopt many shorthand methods of reaching results, heretofore secured through the most tedious processes, and to invest the whole Census with a value relative to the combination of facts not heretofore obtainable in statistical work. These methods have saved the Commonwealth many thousands of dollars, and have secured to it the highest possible results for the least outlay of money.

Mr. Hunt, Chief of Division of Results, has bestowed much thought and labor upon the make-up of tables, but the greatest care in the office arrangement will not bring out the best results without great attention on the part of the printers. This attention the work of the bureau has received from the State printers. Mr. John H. O'Donnell, the superintendent of the printing office, and an expert in everything that pertains to typographical work, takes a great interest in artistic presentation, and to him is due the fine typographical appearance of the Census volumes. No pains have been spared by the printing department to make the Census all that can be wished.

POPULATION AND SEX (page 1). The first table which attracts attention shows the number of males and females, the total population, and the percentages of males and females of the whole population, for each county, city, ward, and town, and for the State.

A comparison of the results for the State with similar figures for 1875 is made in the following summary:

CENSUS YEARS.	Males	Females	Population	PERCENTAGES	
				Males	Females
1885, ...	932,884	1,009,257	1,942,141	48.03	51.97
1875, ...	794,383	857,529	1,651,912	48.09	51.91
Increase, ...	138,501	151,728	290,229	—0.06	+0.06

The total population of the State, May 1, 1885, as shown in the table, was 1,942,141, as against 1,651,912, May 1, 1875, the date of the last Census. The gain, therefore, in the last decade is 290,229, or 17.57 per cent. From 1865 to 1875 the State gained 384,881, or 30.38 per cent, a much larger gain than that during the decade from 1875 to 1885. As the State grows older the percentage of gain from decade to decade will decrease, but this fact alone would not account for the great difference in the percentage of gain between 1865 and 1875, as compared with that between 1875 and 1885. The true cause of the great percentage of gain in the first decade mentioned lies probably in the fact that the period between 1865 and 1875 was, to a very great extent, a speculative one, during which industrial enterprises were launched, and immigration was accordingly abnormal. The great development occurring in the South and West, during the past few years, also, has tended largely to keep the percentage of gain for the past decade at a low figure.

By the table under analysis we find that the males in 1885 numbered 932,884, or 48.03 per cent of the whole population, while the females numbered 1,009,257, or 51.97 per cent of the total population, the excess of females representing 3.94 per cent of the whole population. The males in 1875 numbered 794,383, and represented 48.09 per cent of the whole population, whereas the females were 857,529 in number, or 51.91 per cent of the whole population. Comparing the total number of males and females in 1885, the figures show an excess of females over males of 76,373, or 108.19 females to 100 males. In 1840 the excess of females over males was but 7,672, or 102.13 females to every 100 males. In 1855 there was an excess of females over males of 32,301, or 105.87 females to every 100 males. In 1865 the excess of females was 63,011, or 110.46 females to 100 males; in 1875, 63,146, or 107.95 females to 100 males; and in 1885 the excess, as has been said, is 76,373, or 108.19 females to 100 males.

It will be seen, therefore, that in the last fifty years the percentage of females of the whole population was highest in 1865, being 52.48 per cent, and lowest in 1840, or 50.53 per cent.

The distribution of the excess of males and the excess of females, as regards the relative location in cities and towns, is shown in the following table:

THE STATE, AND COUNTIES.	EXCESS OF MALES				EXCESS OF FEMALES				Net Excess of Females

* Three towns (Chilmark, in Dukes; Bernardston, in Franklin; and Greenwich, in Hampshire) show no excess, there being an equal number of males and females.

From this table it is seen that, for the State, two cities, representing a population of 42,486, or 2.19 per cent of the whole population, show an excess of 1,756 males, while 21 cities, with a population of 1,045,010, or 53.81 per cent of the total population, show an excess of 58,000 females, the net excess of females in the cities as a whole being 56,244. Considering the towns, we find that 124 towns, having a population of 229,816, or 11.83 per cent of the whole population, show an excess of 5,706 males, while 198 towns, representing a population of 622,955, or 32.07 per cent of the total population, show an excess of 25,835 females, the net excess of females in the towns taken as a whole being 20,129. In three towns, representing a population of 1,874, or $\frac{10}{100}$ of one per cent of the total population, there is no excess, there being an equal number of males and females. Reduced to percentages, the cities show 23.53 per cent of the total excess of males; 69.18 per cent of the total excess of females, and 73.64 per cent of the net excess of females. The towns, on the other hand, show 76.47 per cent of the total excess of males; 30.82 per cent of the total excess of females, and 26.36 per cent of the net excess of females.

The composition of the excess of females as regards conjugal condition and ages is considered later on in the analysis of the tables relating to these subjects.

The centre of population of the Commonwealth, as near as it can be computed, is still within a mile radius of the State House, the geographical centre being near Lake Quinsigamond, within the territory of the city of Worcester.

The population of the cities and towns within a radius of eight miles from the State House is shown in the following table for 1875 and 1885, together with the gain or loss for each city or town:

As shown by the table, Boston and its suburbs contain a very large share of the population of the whole State, representing 574,249 people, or 29.57 per cent of the entire population of the State. The same cities and towns comprehended by the radius named had in 1875 a population of 480,419, the gain within this limit during the past ten years being 93,830, or 19.53 per cent.

The population of the cities and towns within a radius of twelve miles from the State House is shown as follows:

* See "Notes," on pages 81–100, *post*, for territorial changes, etc. The town of Wellesley was set off from a part of the town of Needham, April 6, 1881.

The cities and towns within a radius of twelve miles have a population, therefore, of 731,746, or 37.68 per cent of the whole population of the State. The population of the cities and towns within this circle in 1875 was 603,909, a gain of 127,837, or 21.17 per cent, which is nearly five per cent greater than the percentage of gain in the whole State during the last ten years.

The relative population of the cities and towns constitutes a most interesting question at the present time. In 1875 the city population of the Commonwealth was 836,933, or 50.66 per cent of the whole population, and the town population, 814,979, or 49.34 per cent of the total population, the balance in favor of the cities being 21,954, or 1.32 per cent of the total population. In 1885 the cities had 1,087,496, or 55.99 per cent of the whole population, while the towns had a population of 854,645, or 44.01 per cent of the total population, showing a balance in favor of the cities of 232,851, or 11.98 per cent of the whole population. The gain in city population for 1885, as compared with the city population for 1875, is 250,563, or 29.95 per cent, while the gain in town population for 1885, as compared with the town population for 1875, is 39,666, or 4.87 per cent. The net gain in ten years of city population as compared with the gain of town population is, therefore, 210,897, or 25.08 per cent. This great gain in the city population, as compared with the town population, is the result of two causes: of the incorporation of new cities, and of the large increase in the population of cities.

The population of the cities which have been incorporated since 1875 is shown in the following table, for 1875 as towns, and as cities in 1885:

CITIES.	1875	1885
Brockton,	10,578	20,783
Malden,	10,843	16,407
Northampton,	11,108	12,896
Waltham,	9,967	14,609
	42,496	64,695

The population of these places as towns in 1875 was, therefore, 42,496, and 64,695 as cities in 1885, a gain in ten years of 22,199, or 52.24 per cent.

The total population of the 23 cities in 1885 is 1,087,496, as shown; of the same places in 1875 the population was 879,429. The population of the present 325 towns (the number of towns, May 1, 1885), is 854,645, and of the same places in 1875 the population was 772,483. The gain in the population of cities during the last ten years is, therefore, 208,067, or 23.66 per cent, and this gain is 71.69 per cent of the total gain for the whole State, while the increase in the population of the towns is 82,162, or 10.64 per cent, which is 28.31 per cent of the entire gain of the State. Summarized, the whole gain for the State during the last ten years has been 17.57 per cent; for the cities, 23.66 per cent, and for the towns, 10.64 per cent.

The details of population in 1875 and 1885 for these cities, showing the increase and percentage of increase, are given in the following table, the names of cities in italics being those incorporated since 1875:

Analyzing the preceding table, we find that the relative rank of the first twenty-one cities as cities corresponds to their rank as regards the whole number of cities and towns. The two remaining cities, however, Newburyport and Northampton, have a rank as cities of 22 and 23, and as regards the whole number of cities and towns a rank of 23 and 25 respectively. Pittsfield, the first town in point of population, and having a population of 14,466, ranks ahead of the city of Newburyport, which has a population of 13,716, while Attleborough, the second town, with a population of 13,175, ranks ahead of the city of Northampton, which has a population of 12,896. Four towns, Pittsfield, Attleborough, North Adams, and Quincy, have a population of 12,000 or more inhabitants, the number required by law for the incorporation of towns as cities, while the towns next in order, and having a population of 10,000 and over, are Woburn, in Middlesex; Chicopee, in Hampden; Marlborough, in Middlesex; and Weymouth, in Norfolk. The five smallest towns in the State, and having a population of less than 200 inhabitants, are, in the order of size, Gay Head, in Dukes; Monroe, in Franklin; New Ashford and Mount Washington, in Berkshire; and Gosnold, in Dukes.

From the foregoing table showing the relative rank in population of the cities and towns of the Commonwealth a valuable summary is made, which gives the number of towns and cities coming within a certain range of population, the total population and average population represented by each range, and percentages for each range of the whole number of towns and of the total population. This table is as follows:

Not considering the city of Boston, we find from this table that there are two cities which have a population ranging from 60,000 to 70,000, or an average population of 66,248; two cities, from 50,000 to 60,000, or an average population of 58,264; one city, from 40,000 to 50,000, or a population of 45,867; three cities, from 30,000 to 40,000, or an average population of 36,610; eight cities, from 20,000 to 30,000, or an average population of 24,953; three cities, from 15,000 to 20,000, or an average population of 17,180; three cities and eight towns, from 10,000 to 15,000, or an average population of 12,590; 32 towns, from 5,000 to 10,000; 53 towns, from 3,000 to 5,000; 23 towns, from 2,500 to 3,000; 31 towns, from 2,000 to 2,500; 41 towns, from 1,500 to 2,000; 42 towns, from 1,000 to 1,500; 72 towns, from 500 to 1,000; while 23 towns have a population of less than 500.

Summarizing still further the results shown in the table preceding, it is seen that the city of Boston, with a population of 390,393 and representing but $\frac{29}{100}$ of one per cent of the whole number of towns, comprehends 20.10 per cent of the total population of the State; that eight towns, ranging in population from 30,000 to 70,000, represent 2.29 per cent of the whole number of towns and 20.84 per cent of the total population; that 22 towns, ranging in population from 10,000 to 30,000, represent 6.32 per cent of the whole number of towns and 20.06 per cent of the total population; that 85 towns, ranging in population from 3,000 to 10,000, represent 24.43 per cent of the whole number of towns and 22.60 per cent of the total population, while 232 towns, ranging in population from less than 500 to 3,000, represent 66.67 per cent of the whole number of towns and 16.40 per cent only of the total population.

The number of cities and towns at present, that is, May 1, 1885, is 348, 23 cities and 325 towns. In 1875 there were 19 cities and 323 towns, making a total of 342 cities and towns. The newly incorporated cities are as already stated. The towns incorporated since 1875 are Bourne, from Sandwich, in Barnstable; North Adams, from Adams, in Berkshire; Cottage City, from Edgartown, in Dukes; Hampden, from Wilbraham, in Hampden; Millis, from Medway, and Wellesley, from Needham, in Norfolk. Six new towns have been incorporated, and four towns incorporated as cities, making a net gain of four cities and two towns.

Since the Census was taken the town of Hopedale has been incorporated, that part of Milford which was known as Hopedale having been set off as a town, April 7, 1886, while the name of the town of South Abington was changed to Whitman, by Act of March 5, 1886, and by vote of the town, May 3, 1886.

For the convenience of persons making calculations on population in years between Census periods, we have estimated the population for all the years between 1875 and 1885, the year 1880 having been also a Census year, these estimates being, as follows:

Years.	Population	Years.	Population
1875, ...	1,651,912	1881, ...	1,826,049
1876, ...	1,680,934	1882, ...	1,855,072
1877, ...	1,709,957	1883, ...	1,884,095
1878, ...	1,738,980	1884, ...	1,913,118
1879, ...	1,768,003	1885, ...	1,942,141
1880, ...	1,797,026		

The actual population for 1880, or 1,783,085, fell short of estimate by 13,941 persons, showing a retarded increase in population from 1875 to 1880, and a correspondingly accelerated increase in the half decade from 1880 to 1885.

We have also estimated the population for the decade following the Census of 1885, the estimates in both cases being made on purely mathematical bases.

The estimates for 1885 to 1895 are shown as follows:

Years.	Population	Years.	Population
1885, ...	1,942,141	1891, ...	2,146,867
1886, ...	1,976,262	1892, ...	2,180,988
1887, ...	2,010,383	1893, ...	2,215,109
1888, ...	2,044,504	1894, ...	2,249,230
1889, ...	2,078,625	1895, ...	2,283,351
1890, ...	2,112,746

* Includes 69,830 square miles for Indian territory and unorganized territory not shown in table.

By the Tenth Census of the United States, taken in 1880, Massachusetts, with a population at that time of 1,783,085, stands seventh of all the States as regards population, having less population than either New York, Pennsylvania, Ohio, Illinois, Missouri, or Indiana. For density of population of all the States only one stands ahead of Massachusetts, namely, Rhode Island, that State in 1880 having 254.9 inhabitants to the square mile, while Massachusetts had 221.8 inhabitants.

In 1870, Massachusetts had 181.2 inhabitants to the square mile, and Rhode Island 200.3 inhabitants to the square mile. Comparing density of population for other States, we find that New York had 106.7 inhabitants to the square mile; Pennsylvania, 95.2 inhabitants to the square mile; New Jersey, 151.7 inhabitants to the square mile, and Connecticut, 128.5 inhabitants to the square mile.

The following table shows the population to the square mile for the principal countries in the world, as compiled from the last official Censuses of each country, or from official estimates :

Population: By Towns, Alphabetically (page 9). This table has been constructed for the convenience of those desiring to refer to the population of any town. It shows the total number of people in each city and town alphabetically arranged, and locates the towns and cities in their respective counties. Likewise, for the purpose of reference, two other tables have been arranged, namely:

Villages: Alphabetically (page 15), and

Villages: By Towns (page 29).

The notes preceding each of these tables explain their value.

The greatest pains have been taken to make the list of villages perfect, yet the difficulty of securing an absolutely perfect list is so great that no one should be surprised if some village, hamlet, or section of a town has been omitted or incorrectly stated. The list is a list only, the population of the villages not being given. The boundaries of villages and sections in a large majority of cases are not clearly defined and it is impossible, therefore, to ascertain definitely the population of these minor divisions of towns.

POPULATION FOR 1875 AND 1885. INCREASE AND DECREASE. BY TOWNS (page 41). This table gives the population for 1875 and 1885, with increase or decrease by number and percentage, for the State, and for each county, city, and town in the Commonwealth. Comprehending the cities within the designation of town, we find that 195 towns show a gain of 324,904, or 23.42 per cent of their population in 1875. By the Census of 1875, 200 towns made a gain of 491,242, or 51.29 per cent of their population in 1865. The present Census shows a loss in 153 towns of 34,675, or 13.10 per cent of their population in 1875, while 142 towns in 1875 showed a loss of 106,361, or 34.38 per cent. While, therefore, in 1885 a larger number of towns (153) experienced a loss, as against 142 towns in 1875, the loss in actual population in 1885 is but 34,675, as against 106,361 in 1875. Twelve of the counties show a net gain of 292,587, while the counties of Barnstable and Nantucket show a net loss of 2,358, the net gain for the State as a whole being 290,229, or 17.57 per cent, as already stated.

By a study of the table it will be seen, for towns showing decrease, that the loss of population occurs generally in small agricultural towns, except in places where new towns have been incorporated, or a change has been made in territorial lines; for instance, Adams shows a loss of 47.44 per cent. This great loss arises from the fact that North Adams has been set off as a town by itself. As explained in a note on page 48, of the total decrease in population in 153 towns, or 34,675, 12,809, or 36.94 per cent, is due to the loss of territory caused by the division of existing towns and the incorporation of new towns. The losses in these towns are as follows: — Sandwich loses 1,293 to Bourne, in Barnstable; Adams, 7,477 to North Adams, in Berkshire; Edgartown, 542 to Cottage City, in Dukes; Wilbraham, 852 to Hampden, in Hampden; Medway, 683 (a part only of its total loss) to Millis, and Needham, 1,962 to Wellesley, in Norfolk. A few manufacturing towns show losses, also, due to business depression at the time of taking the Census. The greatest losses, independent of town changes, are to be found in Brewster, in Barnstable; Becket, Richmond, and Washington, in Berkshire; Holland, in Hampden; Plympton, in Plymouth; and Phillipston, in Worcester; each of these towns showing a loss of over 20 per cent of its population in 1875.

Over 50 cities and towns show a gain of more than 25 per cent each, the most marked instances being Montague, in Franklin, with a gain of 66.54 per cent over 1875; Holyoke, in Hampden, 71.56 per cent; Dracut, in Middlesex, 72.67 per cent; Everett, in Middlesex, 59.55 per cent; Framingham, in Middlesex, 60.15 per cent; Malden, in Middlesex, 51.31 per cent; Melrose, in Middlesex, 52.91 per cent; Norwood, in Norfolk, 67.01 per cent; Brockton, in Plymouth, 96.47 per cent; Revere and Winthrop, in Suffolk, 126.89 and 118.50 per cent, respectively; Gardner, in Worcester, 95.25 per cent; Hardwick, in Worcester, 57.88 per cent; and Spencer, in Worcester, 51.29 per cent; all these gains being independent of territorial changes.

POPULATION FOR 1875 AND 1885. INCREASE AND DECREASE. BY SEX (page 51). This table gives the total number of males and females for 1875 and 1885, together with the number and percentage of increase or decrease, by sex, for counties, cities, and towns, and for the State. There were 794,383 males in 1875 and 932,884 males in 1885, while the females numbered 857,529 in 1875 and 1,009,257 in 1885. The gain in males since 1875 is, therefore, 138,501, being an increase of 17.44 per cent over the males in 1875, while the gain in females is 151,728, or 17.69 per cent. The males make a gain in 192 towns and a loss in 156;

From this table we find that the gain between 1875 and 1885 was 17.57 per cent, as against 30.38 per cent for the decade between 1865 and 1875, and 11.89 per cent between 1855 and 1865. The largest percentage of gain for any one period was 34.81, from 1840 to 1850, the next largest being for the period from 1865 to 1875, when, as has just been stated, it was 30.38 per cent. The percentages of gain for the counties and for the State, for 120 years, or from 1765 to 1885, the entire period covered by the table, vary from 2,534.90 per cent, for Suffolk, to 76.26 per cent, for Dukes, the percentage of gain for the State being 715.36. But one county, Nantucket, shows a loss, or a net decrease in population for 120 years of 5.36 per cent.

The increase in population for the city of Boston as estimated and taken at different periods since and including 1638, as representing the growth of the chief city in New England, is presented in tabular form, to which is appended a series of explanatory notes.

From this table, which is the result of research for periods commencing with 1638, it is seen that the growth of the population of the city of Boston has been steady, and, also, for all annexed districts which have while the females gain in 190 towns and lose in 157. In one town (Southampton) there was the same number of females in 1885 as in 1875. In this analysis of increase or decrease by sex towns comprehend cities, as previously stated.

CENSUSES OF POPULATION: 1765 TO 1885. BY TOWNS (page 61). This is one of the most interesting and, at the same time, valuable tables in this Part. It shows the population of the State for the colonial Censuses of 1765 and 1776; the Federal Censuses from 1790 to 1880 inclusive, and the State Censuses from 1855 to 1885 inclusive.

The following short table shows the percentages of gain for the State and counties by Census periods since 1765, and percentage of gain for 120 years, or from 1765 to 1885.

been brought together to make what is now the metropolis of New England. It is an exceedingly interesting presentation, showing as it does for the various periods, in addition to the total population for Boston (including annexations), the population of Boston proper, the population of the annexed territory as a whole, and the population of the various annexed territories before and after annexation, together with the dates of annexation. With this table* before us (see pages xl and xli) we can examine the movement of population by decades or half decades. Beginning with 1855, and taking the facts for each half decade since and including the year 1885, as we have had a quinquennial census since then either by the State or Federal Government, we find that the increase of population from 1855 to 1860 for the city of Boston as constituted at that time was 17,350; of this increase 7,267 was in the city proper, and 10,083 in the annexed districts of East Boston, South Boston, and the Islands. During this same period, the territory which was subsequently

[a] By Boston proper is meant the territory of Boston, independent of all annexations.

[b] Estimates made in the years named. Those for 1675 and 1698 were probably too large.

[c] Estimates based on censuses of polls.

[d] Estimate based on actual number of houses in 1789, and the average persons to a house, as shown by U. S. census of 1790.

[e] By the State census of May, 1840, the population of Boston was 84,401. Mr. Shattuck, in his report on the census of Boston for 1845, shows clearly that the U. S. census of 1840 was incorrect.

[k] The population, as usually given in census tables, includes that of the islands in the harbor.

annexed, but which did not form a part of the city of Boston at that time, showed an increase in population of 13,440, making a total increase for the period named of 30,790 for all the various parts which make up the city of Boston of today. Comprehending, therefore, in the analysis of the increase of population for subsequent decades all the territory within the city of Boston as at present constituted, we find that between 1860 and 1865 there was a total gain of 21,130, of which 7,520 was in Boston proper, 6,958 in the annexed territory, and 6,652 in the territory not annexed at that time. Between 1865 and 1870, there was an increase of 23,876 for the same territory, Boston proper showing a loss of 2,302 persons, while its annexed territory gained 19,065, Roxbury and Dorchester having been annexed during this period; in the territory not yet annexed there was an increase of 4,811. During the next period, or from 1870 to

c Estimates based on censuses of polls.

f Estimated.

g Included also in the population of Dorchester in this year. After 1855 Washington Village is included in South Boston.

h The population of South Boston could not be stated definitely for 1875, because the wards including South Boston also included a part of Boston proper. The figures given are very close, however.

i The territory of Roxbury and Dorchester was not kept intact by ward boundaries in the ward division of 1875; it is difficult, therefore, to give the exact population of each district by the census of 1880. The figures given are the result of very careful study of the population by census enumeration districts, of which there were 208 in Boston for the U. S. census of 1880.

m For the separate islands as follows: 1880 — Breed's, 152; Deer, 851; Galloupe, 5; Rainsford, 187; Long, 49; Lovell, 5; Spectacle, 53; Thompson's, 106; Fort Independence, 13; Fort Warren, 112; Fort Winthrop, 12. 1885 — Breed's, 348; Deer, 1,145; Galloupe, 6; Rainsford, 204; Long, 81; Lovell, 7; Spectacle, 61; Thompson's, 122; Fort Independence, 11; Fort Warren, 129; Fort Winthrop, 25.

1875, occurred the annexations of Charlestown, West Roxbury, and Brighton, the total population for the city as a whole being 341,919, as compared with a population for the same territory in 1870 of 292,502, an increase of 49,417, of which 1,888 was in the city proper and 47,529 in the annexed territory. From 1875 to 1880, there was a gain of 6,406 in the city proper and 14,514 in the annexed territory, or a total gain of 20,920, while from 1880 to 1885 the total increase was 27,554, all but 63 of this increase being in the annexed territory. The average increase for the six half decades named was 28,948. It will be seen, therefore, that the gain during the last half decade was quite up to the average gain for the half decades since 1855. The gain during the last half decade, too, has been greater than in any other half decade mentioned, except for those between 1855 and 1860, and 1870 and 1875. Between 1870 and 1875 there was an abnormal growth not only in the city, but in the State. The revival of industries, great bodies of immigrants coming in, the speculative fever, all conspired to increase our population beyond the normal rate.

In examining the growth in detail by different parts of the city we find that in the period between 1855 and 1860 the city shows a gain of 10.81 per cent, while during the next five years, 1860 to 1865, the gain was but 8.14 per cent. No territory had been gained by annexation except in the early history of the city. Population was seeking the suburban districts, and the ratio of increase was becoming less each year. Between 1865 and 1870 Boston gained 30.27 per cent in population, a gain almost entirely due to the annexation of Roxbury, in 1867, and Dorchester, in 1869, both rapidly growing suburbs. East Boston and South Boston made gains, but the city proper during this period not only did not grow, but on the contrary actually lost more than one per cent of its population. Between 1870 and 1875 the total gain was 36.48 per cent, but this large gain was mainly due to annexation and to the growth of recently annexed territory. Charlestown, West Roxbury, and Brighton came within the city limits in 1873, and 56.39 per cent of the total gain of the city's population was due to this source, and 21.01 per cent to growth within the districts of Roxbury and Dorchester. Since 1875 no new territory has been gained, and the capacity for expansion is, therefore, confined to the city area as now defined. Between 1875 and 1880 the city gained 6.12 per cent in population, but 55.15 per cent of the total gain took place in the four districts of Roxbury, Dorchester, West Roxbury, and Brighton. Between 1880 and 1885 the total gain of the city was 7.59 per cent, a larger ratio of growth than was shown in the previous five years; but 61.30 per cent of this growth, however, was in the four districts just named. The city proper shows no material change. Charlestown, although during this last period, 1880 to 1885, showing an increase of 3,942, has practically reached its limit of expansion. This is also true of East and South Boston. The increasing ratio of growth in Roxbury, West Roxbury, Dorchester, and Brighton as compared with the growth of the city, as a whole, indicates the direction of the future growth within the present city limits, while the inspection of growth in each Census period since 1855, in connection with the causes of the exceptional increase between 1865 and 1875, clearly indicates the fact that any marked increase of population must be based upon future annexations. The territory of the four most rapidly growing districts, namely, Roxbury, Dorchester, West Roxbury, and Brighton, is over 77 per cent of the whole territory of Boston, and it is in this part of the territory of Boston as at present constituted that future gains must be made. Out of 27,554, the total growth of Boston between 1880 and 1885, 16,891 was in these four districts.

NOTES. DATES OF INCORPORATION, CHANGES IN NAME, AREA, BOUNDARIES, POPULATION, ETC., OF COUNTIES, CITIES, AND TOWNS (page 81). In the report on the Census of 1875 there appeared a chapter of notes relating to dates of incorporation, changes in name, area, boundaries, population, etc., of counties, cities, and towns. The data for this chapter of notes appeared originally in an abstract of the United States Census of 1860, prepared under the direction of the Secretary of the Commonwealth, changes subsequent to 1860 being supplied in 1875 from official sources. These notes have been made complete to the present time and are repeated in this volume, reference marks to these notes for various changes being used in population tables, as therein indicated. These notes follow the population tables proper, as being the most convenient arrangement. Much labor has been expended in verification and in securing accurate information relative to changes in name, area, boundaries, etc. The notes show the gain or loss in population for 1885, as compared with the population for 1875, for counties, cities, and towns, and give the causes for such gains and losses, as returned by the enumerators.

POLLS AND VOTERS (page 101). This table exhibits for each county, city, ward, and town, with county and State recapitulation, the number of ratable polls classified as voters, those not voters, and as aliens; legal voters, classified as native born and foreign born or naturalized voters; and gives percentages of the aliens of polls; polls of population; voters of polls, and voters of population.

By law, every male 20 years of age residing in the State on the first day of May in any year, and not a pauper or exempt by law, is a poll, and should be taxed as such. The Census reports the number of such persons on May 1, 1885, to be 567,959, this number being 29.24 per cent of the whole population. Of this number 442,616, or 77.93 per cent of the whole number of polls, are given as legal voters; 26,212, or 4.62 per cent of the number of polls, as not voters; and 99,131, or 17.45 per cent, as aliens; that is, men of foreign birth, old enough to become naturalized voters, who have not resided in the country long enough, or who, though resident here the required time, have neglected to secure citizenship. In 1875 the total number of polls was 449,686, the increase in 1885 over 1875 being 118,273, or 26.30 per cent.

The number of polls, as returned by the Census and by the assessors, always differs vastly. The polls returned by the assessors, May 1, 1885, the date comparing with the Census, was 519,446, being 48,513 less than the number returned by the Census. The difference in 1875 was 31,898. This difference is accounted for in various ways.

First, the assessors are inclined, in the interest of their town or city governments, to pass by those whom they think would make undesirable citizens, and who by taxation would become pauper residents under the law; and second, large numbers of men, who are employed temporarily on great works, sewers, etc., on the first day of May, are passed by entirely by the assessors, but must be considered polls by the Census enumerator, as he is obliged to follow the strict legal definition of a poll.

The whole number of voters, those who might vote, were it not for some temporary disability, removable at will, is 442,616, as against 351,113 in 1875; the voters in the latter year formed 21.25 per cent of the whole population, while now they constitute 22.79 per cent. There were 91,503 more voters in 1885 than in 1875, or an increase of 26.06 per cent.

During the past year there has been much discussion relative to the exact definition of a legal voter. The constitutional provision for the Decennial Census requires that the legal voters for each town and city, and each ward of a city, shall be enumerated for the purposes of apportionment of senators and representatives. For Census purposes in all the Censuses under this provision, a legal voter has been considered as a person who could vote constitutionally, should he see fit so to do; that is, if he had no constitutional disabilities, but only those of a temporary character, like non-registration or non-payment of a tax, he should be enumerated as a legal voter. In other words, the potential voters have always been considered the proper ones on which to base an apportionment. It is often held that the Census Office should consider as legal voters only those who could vote on the voting lists of the State, but to act in accordance with this suggestion would involve a great deal of difficulty, as men on the first day of May, at the time when the constitution requires the enumeration to be made, might not be borne on the voting list of the previous November, or the disability might have been removed voluntarily since the November list. To be sure, the law provides that they must be borne on the lists of the previous November to be considered as voters, for legal purposes, and until new lists are made; but the greatest objection arises from the fact that the voting lists do not uniformly comprehend all those who might have been, or who might be, borne on the lists, so far as any disability as voters is concerned. An exciting campaign causes a large registration, while a campaign free from exciting affairs results in a small number of registered voters. This is as likely to occur in the Census year as in any other, and an apportionment based upon the number of voters borne on the voting lists would be very sure to result in great inharmony, and in much injustice to various parts of the Commonwealth. On the Census basis the apportionment is fair, just, and equal, so the Census officer, whoever he has been, whether the Secretary of the Commonwealth or the Chief of the Bureau of Statistics of Labor, has conformed to the original idea of enumerating the potential voters of the State.

The following table of percentages for 1875 and 1885 gives a very complete analysis of our voting population, and is sufficiently clear without text comment:

The aliens of the State, meaning by aliens, for Census purposes, all males over 20 years of age, of foreign birth, who have not been naturalized, numbered 79,136 in 1875; they now number 99,131. The distribution of these aliens by nationality, drawn from the tables on place of birth (page 575, *post*), is shown in the following table:

It is instructive to know to what extent the males of different nationalities become citizens, in the sense of being voters. A short table, therefore, has been compiled showing, for each place of birth specified, the percentages of aliens of foreign born males 20 years of age and over. By this table, which follows, we find that the whole number of aliens in the State, or 99,131, constitutes 48.07 per cent of the whole number of foreign born males 20 years of age and over, the latter being 206,227; that is to say, of the latter number of foreign born males 20 years of age and over, 48.07 per cent have not been naturalized. This total number of aliens as distributed by place of birth shows some interesting features. For instance, of the total number of males 20 years of age and over born in British America, or 49,534, those not naturalized are 33,754, or 68.14 per cent of the whole number of males 20 years of age and over born in that country. They are subdivided, as follows: of 5,307 English Canadian males 20 years of age and over, 3,181, or 59.94 per cent, have not become naturalized; of 22,427 French Canadian males 20 years of age and over, 17,292, or 77.10 per cent of the whole number, have not been naturalized; of the total number of males 20 years of age and over born in Nova Scotia, or 13,645, those not naturalized, or aliens, number 8,703, or 63.78 per cent; of 5,041 males 20 years of age and over born in New Brunswick, 2,799, or 55.52 per cent, are not naturalized; of 1,011 males 20 years of age and over born in Newfoundland, 470, or 46.49 per cent, are not naturalized, while 1,303 out of a total of 2,090 males 20 years of age and over born in Prince Edward Island, or 62.34 per cent, have not become naturalized. The Chinese males 20 years of age and over number 383; of this number 347, or 90.60 per cent, are still aliens. The foreign born males 20 years of age and over from the Continent of Europe, not including Great Britain and Ireland, number 25,408; of this number 14,578, or 57.38 per cent, are still aliens. The highest percentage of aliens coming from Europe is shown for Italy, there being 2,190 males 20 years of age and over, and 1,874 aliens, these aliens constituting 85.57 per cent of the males 20 years of age and over. The aliens born in Portugal, or 2,175, represent 75.05 per cent of the 2,898 males 20 years of age and over born in that country. The Germans have naturalized to a large extent, for out of 10,908 males 20 years of age and over, 4,473, or 41.01 per cent only, have not become citizens. Looking at Great Britain and Ireland, we find that the Irish born males 20 years of age and over number 98,199, of which number 35,600, or 36.25 per cent only, are still aliens, the Irish thus ranking all other nationalities in the extent to which they become naturalized. Of the English males under consideration, 45.00 per cent have not become naturalized, while 49.76 per cent of the Scotch have not taken on American citizenship.

The table shows a more complete distribution than has been described in the text, and is as follows:

The composition of the voters of the Commonwealth, as to nationalities, occupations, ages, and other valuable points, will be given in a future report of the Bureau, under a part like that published in 1882, and entitled "Citizenship."

FAMILIES: NUMBER AND AVERAGE SIZE (page 115). The total number of families in the Commonwealth is 424,415, and their average size 4.58, the average size of families for counties ranging from 3.06, for Nantucket county, to 4.84, for Suffolk county. In 1875 there were 359,009 families, the average size being 4.60. There has been a gain of 65,406 families in 1885 as compared with 1875.

SIZE OF FAMILIES (page 121). The presentation of families by exact size comprehends first the number of families for each size, that is, persons to a family, for families of one person to families of 23 persons and over both inclusive; second the total number of families having 23 persons and over, as shown in the first table, in detail, and third the population represented by each size and by classified sizes, the third showing being for the State and counties only. From these tables we bring forward first a summary table for the State, showing the number of families for the principal sizes, and the population represented by each size, as compared with 1875, as follows:

SIZE OF FAMILIES.	1875		1885	
	Number	Population	Number	Population
THE STATE.	359,009	1,651,912	424,415	1,942,141
Families: 1 person,	11,869	11,869	17,141	17,141
Families: 2 persons,	57,228	114,456	70,398	140,796
Families: 3 persons,	69,987	209,961	82,760	248,280
Families: 4 persons,	66,000	264,000	75,601	302,404
Families: 5 persons,	53,184	265,920	60,355	301,775
Families: 6 persons,	37,856	227,136	43,488	260,928
Families: 7 persons,	25,967	181,769	29,592	207,144
Families: 8 persons,	15,488	123,904	18,410	147,280
Families: 9 persons,	8,954	80,586	11,213	100,917
Families: 10 persons,	4,997	49,970	6,180	61,800
Families: 11 persons,	2,722	29,942	3,379	37,169
Families: 12 persons,	2,190	26,280	1,875	22,500
Families: 13 persons,	493	6,409	1,020	13,260
Families: 14 persons,	342	4,788	620	8,680
Families: 15 persons,	267	4,005	428	6,420
Families: 16 persons and over,	1,465	50,917	1,955	65,647

This table shows that for 1885 there has been no change in the relative preponderance of families of certain sizes, families of three persons being the most numerous, as in 1875, and so on for all the sizes to families of 15 persons inclusive, the ratio of the numbers representing the total families of each size being substantially the same in 1885 as in 1875.

The second summary table shows families by classified sizes, for 1875 and 1885, giving the number of families and population for each classified size and the average size for each class. The table follows:

SIZE OF FAMILIES.	1875			1885		
	Number	Population	Average Size	Number	Population	Average Size
THE STATE.	359,009	1,651,912	4.60	424,415	1,942,141	4.58
Families: 1 person,	11,869	11,869	1.00	17,141	17,141	1.00
Families: 2 to 7 persons,	310,222	1,263,242	4.07	362,194	1,461,327	4.03
Families: 8 to 13 persons,	34,844	317,091	9.10	42,077	382,926	9.10
Families: 14 persons and over,	2,074	59,710	28.79	3,003	80,747	26.89

From this table it is seen that the families of one person in 1885 number 17,141 as compared with 11,869 in 1875. The families containing from 2 to 7 persons in 1885 number 362,194 and represent a population of 1,461,327 persons, the number of persons to a family being, on an average, 4.03. In 1875 the average size of families containing from 2 to 7 persons was 4.07. Families of 8 to 13 persons have the same average size, or 9.10 persons, in 1885 as in 1875. For families containing 14 persons and over, the average size in 1885 is 26.89 as against 28.79 in 1875.

The third summary table shows the number of families, in 1885, by classified sizes, and the percentages of number of families and of population represented for each size of total families and of total population, as follows:

SIZE OF FAMILIES.	Number	Population	PERCENTAGES	
			Of Total Families	Of Total Population
THE STATE.	424,415	1,942,141	100.00	100.00
Families: 1 person,	17,141	17,141	4.04	0.88
Families: 2 to 7 persons,	362,194	1,461,327	85.34	75.24
Families: 8 to 13 persons,	42,077	382,926	9.91	19.72
Families: 14 to 22 persons,	2,196	36,110	0.52	1.86
Families: 23 persons and over,	807	44,637	0.19	2.30

If we analyze the results shown by the percentages as given in this table, we find that the families of one person each represent 4.04 per cent of the total families and $\frac{88}{100}$ of one per cent of the total population; families of two to seven persons, 85.34 per cent of the total families and 75.24 per cent of the total population; families of eight to thirteen persons, 9.91 per cent of the total families and 19.72 per cent of the total population; families of fourteen to twenty-two persons, $\frac{52}{100}$ of one per cent of the total families and 1.86 per cent of the total population, and families of twenty-three persons and over, $\frac{19}{100}$ of one per cent of the total families and 2.30 per cent of the total population. Briefly stated, families of one to thirteen persons represent 99.29 per cent of the whole number of families and 95.84 per cent of the whole population.

It is the practice in Census taking to consider the family as comprehending not only the normal family, but every aggregation of individuals living under one roof, or as related in some way, either arbitrarily or otherwise, to one head. In all past Censuses, therefore, the family has comprehended hotels, boarding houses, lodging houses, penal and reformatory institutions, asylums, hospitals, boarding schools, college dormitories, government stations, etc., and it has been thought that this artificial extension of the composition of the family has had a mischievous effect upon the average size of the family. To ascertain whether this is true or not, the composition of the Census family has been analyzed so that each part, or each element likely to affect the average size of the normal family, is treated separately. This tabular analysis comprehends persons residing in private families, in hotels, restaurants, boarding and lodging houses, students and scholars at college and in boarding schools, inmates and officials of institutions, etc., as enumerated above, and shows for each of these subdivisions of the Census family the average number of persons represented for certain classified sizes of families and for the total number of families of all sizes, as follows:

The average size of the families of Massachusetts on the old Census basis, comprehending the normal family and all the institutions and other bodies comprehended in the title, is, as we have seen, 4.58. Eliminating all families coming under the artificial designation, as shown in the foregoing table, it is seen that the average size of the actual normal family of Massachusetts is 4.45, the influence arising from including the artificial or arbitrary family, so far as the State taken as a whole is concerned, being but 0.13. Practically, it makes but little difference then, so far as great bodies of people are concerned, as, for instance, the population of the State, whether the families are considered on the basis of the actual normal family, or on the ordinary Census basis which includes all aggregations living under one roof or having certain relations to one head. Whether this is true or not as regards towns in which there is some large institution is a matter worthy of consideration. Danvers, for instance, contains a large asylum for the insane. The number of families exclusive of this asylum is 1,473, representing a population of 6,143, the average size of the family being, therefore, 4.17. With the asylum added there are 1,474 families, in the Census sense, representing a population of 7,061. This raises the average size of families for Danvers to 4.79. In Concord, without the State reformatory, the average size of the family is 4.62; including the reformatory, it is 5.15. In Tewksbury the average size of the normal family is 4.50; including the Almshouse, it is 7.05. In Wellesley, the average size of the normal family is 5.10; including Wellesley College, it is 6.15. The rule, therefore, that the average size of the family is not materially affected by including the artificial, or arbitrary family, does not apply fully to towns and cities in which large institutions are located.

of persons and families to dwellings occupied, for each county, city, ward, and town in the Commonwealth. The total number of houses is 324,828; 310,248 being occupied, which is 95.51 per cent of the whole number, and 14,580 unoccupied, or 4.49 per cent of the whole number. In 1875 there were 267,223 houses in all; 255,518, or 95.62 per cent, being occupied, and 11,705, or 4.38 per cent, being unoccupied. There are 99,587 more families than dwelling-houses. In 1875 there was an excess of families over dwelling-houses of 91,786. The average number of families to each dwelling occupied is 1.37, as against 1.41 in 1875. Occupied dwelling-houses contain on an average 6.26 people, while in 1875 they contained 6.46. If all the houses in the Commonwealth were occupied, there would be 5.98 persons to each dwelling in 1885, as compared with 6.18 persons in 1875.

The following summarized table for the State shows the materials of which the dwelling-houses are constructed:

The information contained in this table concerning the materials of which the dwelling-houses in the State are constructed is presented for the first time in this State as a part of the Census. Of the total number of dwelling-houses in the whole State, or 324,828, a large proportion, it will be seen, namely, 297,958, or 91.73 per cent, are of wood, and 25,128, or 7.74 per cent of the whole number of houses, are entirely of brick. Of the whole number of houses built entirely of brick, 16,796, or 66.84 per cent, are in Suffolk county. The houses that are built entirely of stone number 648; those built entirely of cement, 138; those built of wood and brick, 627; those built of brick and stone, 261, while the remaining 68 are built of combinations of materials other than those we have

In a comparison table we present the areas in square miles, for the land surface only, of the State and each county, and show for the State and counties, for 1875 and 1885, the total number of persons, families, and dwellings; the number of persons, families, and dwellings to a square mile; acres of land to a person; acres to the family; persons to a dwelling (occupied and unoccupied), and persons to a family. † Occupied and unoccupied dwelling-houses.

A summary, for the State, is drawn from the preceding table for convenience of reference, as follows:

CLASSIFICATION.	1875	1885
Area (square miles),	8,040	8,040
Persons,	1,651,912	1,942,141
Families,	359,009	424,415
Dwellings,	267,223	324,828
Persons to a square mile,	205.46	241.56
Families to a square mile,	44.65	52.79
Dwellings to a square mile,	33.24	40.40
Acres to a person,	3.11	2.65
Acres to a family,	14.33	12.12
Persons to a dwelling (occupied and unoccupied),	6.18	5.98
Persons to a family,	4.60	4.58

From this table we find the number of persons to a square mile in 1885 to be, on an average, 241.56, as against 205.46 in 1875; the number of families to a square mile, 52.79 in 1885 and 44.65 in 1875, and the dwellings to a square mile, 40.40 in 1885 and 33.24 in 1875. For the number of acres to a person we have 2.65 in 1885 and 3.11 in 1875, while for acres to a family the figures are 12.12 in 1885 and 14.33 in 1875. The number of persons to a dwelling and to a family has been previously considered.

COLOR AND RACE: BY NATIVE AND FOREIGN BORN (page 183). The white, black, mulatto, Chinese, Japanese, and Indian population of the Commonwealth, subdivided as to native and foreign born, and distinguished by sex, is shown by this table for each county, city, and town.

The proportion of these various peoples to the whole population, for 1875 and 1885, is shown for the State as follows:

COLOR AND RACE.	1875		1885	
	Number	Percentage	Number	Percentage
THE STATE.	1,651,912	100.00	1,942,141	100.00

Mulatto,	5,038		5,336	
Chinese,	278		432	
Japanese,	10		20	
Indian,	520		410	

The total white persons, as is seen, represent 99.01 per cent of whole population, the same as in 1875; the percentage for all other people in the State being only $\frac{99}{100}$ of one per cent.

The distinction by sex, and whether native or foreign born, is shown for the State, as follows:

Indian, . .	201	11	212	189	9	198	390	20	410

The percentages of native and foreign born for these various peoples are shown in the following table:

COLOR AND RACE.	PERCENTAGES	
	Native Born	Foreign Born
THE STATE.	72.87	27.13
White, ...	72.71	27.29

Mulatto, ...	88.66	11.34
Chinese, ...	0.46	99.54
Japanese, ...	–	100.00
Indian, ...	95.12	4.88

Analyzing these percentages, we find that for white persons, who constitute 99.01 per cent of the total population, as has been already stated, the percentages for native and foreign do not differ materially from the percentages of the total native and foreign born. For black persons, however, 91.68 per cent are native born and 8.32 per cent are foreign born; of the whole number of mulatto persons 88.66 per cent are native born, while 95.12 per cent of the total number of Indians in the State are, also, native born. The Chinese and Japanese persons in the State are nearly all foreign born.

CONJUGAL CONDITION. NATIVE AND FOREIGN BORN. BY AGE PERIODS (page 209). This is a presentation of conjugal condition, by sex, and age periods, subdivided as to native and foreign born, for each county, city, and town in the State. The table shows, also, the total number of native and foreign born persons for each city and town, and in detail as to conjugal condition, and for the same age periods, these age periods being under 14 years, 14 to 19 years, 20 to 79 years, 80 years and over, and all ages. An analysis table, showing, for the State, the number and percentage of males, females, and total population, of each conjugal condition and of native and foreign born, in 1875 and 1885, follows:

Considering conjugal condition, we find that the number of single males is 531,113, or 56.93 per cent of the whole number of males, while the number of single females is 539,038, or 53.41 per cent of the whole number of females. The aggregate of single persons is 1,070,151, or 55.10 per cent of the whole population. The number of married males is 368,457, or 39.50 per cent of the whole number of males, while the number of married females is 371,129, or 36.77 per cent of the whole number of females. The total married persons number 739,586, or 38.08 per cent of the whole population. In 1875, 39.06 per cent of the whole population were married. The number of widowed males is 32,154, being 3.45 per cent of the total number of males, while the number of widowed females is 97,158, or 9.63 per cent of the whole number of females in the State. The total widowed persons number 129,312, or 6.66 per cent of the whole population, that is, the number of widowed in the State is one-sixteenth of the entire population of the State. The divorced males number 1,037, while divorced females number 1,919. This difference is undoubtedly due to the fact of desertion on the part of the husband, leaving the wife within the Commonwealth to seek her divorce.

Comparing the results for 1875 and 1885 concerning native and foreign born, we find in 1885 that 688,284 males, or 73.78 per cent of the total males, are native born, and 244,600, or 26.22 per cent, foreign born, as against 74.86 per cent native born and 24.68 per cent foreign born, respectively, in 1875. For females, 726,990, or 72.03 per cent, are native born, as against 73.60 per cent in 1875, and 282,267, or 27.97 per cent, are foreign born, 25.98 per cent in 1875 being foreign born. The total number of native born persons in 1885 is 1,415,274, or 72.87 per cent of the total population, as compared with 74.21 per cent in 1875. The foreign born number 526,867 and represent 27.13 per cent of the total population, as against 25.36 per cent in 1875, an increase of foreign born as regards

Extending the analysis of conjugal condition as regards native and foreign born persons, we have some interesting results. This is done in two brief tables, the first showing number and the second percentages for each conjugal condition as regards native and foreign born males and females and the total number of native and foreign born persons. The tables follow :

By these tables it is seen that of the whole number of native born males in the State, 439,448, or 63.85 per cent, are single, while 228,276, or 33.17 per cent, are married. Of the total number of foreign born males 91,665, or 37.48 per cent, are single, while 140,181, or 57.31 per cent, are married. Of native born females 59.89 per cent are single and 31.85 per cent married, while of foreign born females 36.70 per cent are single and 49.45 per cent are married. It is significant that of the 2,956 divorced people in the State, 2,560 are native born and only 396 foreign born.

The apparent disproportion of the percentages showing conjugal condition for native and foreign born males and females is readily explained. Foreign born persons are generally married or at a marriageable age when they come to this country, and the percentage of married persons of foreign birth is very much in excess, therefore, of the percentage of native born persons who are married, the children of native birth, who outnumber largely the children of foreign birth, being considered necessarily in figuring percentages of conjugal condition for native born persons. Of the total number of males under 20 years of age 321,785 are native born and 38,373 foreign born, while for females under 20 years of age 320,354 are native born and 43,466 foreign born. If we consider conjugal condition as regards native and foreign born persons 20 years of age and over, the disproportion of percentages referred to largely disappears, as will be seen below, the first table showing number and the second percentages:

Comparing percentages, as shown in this table, we find for native born males 20 years of age and over that 32.20 per cent are single and 62.19 per cent are married. For foreign born males of similar age, we find that 25.90 per cent are single and 67.92 per cent are married, or 5.73 per cent more than the percentage for married males of native birth. For single females, the percentages are 29.09 for native born and 25.67 for foreign born, while for those who are married we find a slightly larger percentage for foreign born, this percentage being 57.97 as compared with 56.16 per cent for native born females.

By these tables on conjugal condition the distribution of the excess of females, so far as conjugal condition is concerned, can be determined. Under the table of POPULATION AND SEX it was seen that the number of females in Massachusetts exceeded the males by 76,373, the total number of males being 932,884, and the total number of females 1,009,257. By the conjugal condition table it will be seen that the total number of single males is 531,113, and the total number of single females 539,038, an excess of single females over single males of 7,925. The total number of married males is 368,457, of married females 371,129, a surplus of 2,672 married females. The total number of widowed males is 32,154, and of widowed females 97,158, a surplus of widowed females of 65,004. The divorced males number 1,037, and the divorced females 1,919, a surplus of divorced females of 882.

This excess of females by conjugal condition, for both native and foreign born, is summarized in the following table:

In 1875 the composition of the excess of females was as follows: of single women, 8,978; of married women, 1,785; of widowed women, 52,903; and of divorced women, 817.

From the tables on conjugal condition and native and foreign born, figures can be drawn, if desired, showing for each age period the conjugal condition of males and females by number and percentage, whereby would be seen: first, the distribution by conjugal condition for each age period of native and foreign born males and females; and second, the distribution of each conjugal condition by age periods for native and foreign born males and females.

Color and Race. Conjugal Condition. By Age Periods: Native and Foreign Born. For the State and Counties (page 279). This is a short table showing conjugal condition as regards color and race, by sex, for the age periods under 14, 14 to 19, 20 to 79, 80 and over, and all ages, subdivided as to native and foreign born, for each county and for the State.

To have presented these facts for each city and town would have consumed at least two hundred pages, and, while a valuable table and a novelty in Census taking, it has been deemed best to confine it simply to county and State aggregates. The Bureau can furnish for any town or city in the Commonwealth a like showing, should any one desire the same for local purposes.

Ages (page 297). This table should be used in connection with the explanatory notes to be found on page 299. The ages of the people in the State are shown in four tabular presentations, designated as follows: Ages: Under 1 to 80 Years and Over; Ages: Under 1 Year, in Detail by Months; Ages: 80 Years and Over, in Detail; Ages: By Periods of Years.

In the first of these tables the number of persons under 1 year of age and for each year from 1 to 79 inclusive, together with the number who are 80 years and over, are carefully shown by sex and totals for each county, city, and town.

The number of males 80 years of age and over in the whole State is 5,892, and of females 9,624, making a total of 15,516. The average age for males is 28 years and 3 months; 29 years and 2 months for females, and 28 years and 9 months for both sexes. In 1875 the average age for males was 27 years and 6 months, and for females 27 years and 10 months, or an average age for the whole people of 27 years and 8 months. The average death age for 1885, as given in the Massachusetts Registration Report, is 34.23 years. The average age of the population above 20 years is for males 40 years and 7 months; for females, 40 years and 11 months, and for all persons, 40 years and 9 months. In 1875, for those above 20 years, the average age was for males 40 years and 9 months; for females, 40 years and 6 months, and for all persons, 40 years and 7 and one-half months. In casting these averages the small number whose ages are unknown has not been included.

The concentration of ages on the quinquennial periods noticed in past Censuses is also noticeable in this, although not so marked. For all persons 20 years of age by this Census there were 38,659, while of those 21 years of age there were 36,438 ; in 1875 there were 34,677 persons 20 years of age and 30,306 persons 21 years of age. Of persons 25 years of age there were by this Census 44,087, while of persons 26 years of age there were 37,950; in 1875 there were 36,198 persons 25 years of age and 29,042 persons 26 years of age. The same difference is discernible at the quinquennial periods beyond 25 years, the discrepancy increasing as the age increases. For instance, for persons 40 years of age there were by this Census 38,331, while for persons 41 years of age there were 18,061 only. In the same way, we find for 50 years of age there were returned by this Census 29,855 persons, while of those 51 years of age there were but 13,538. This is a marked improvement over ten years ago, when those of 50 years of age numbered 28,090, while those 51 years of age were returned as 9,533.

The second and third tables of ages show by sex and totals the ages in detail by months and by years for the total number of persons of the ages "under 1 year" and " 80 years and over" (80+), respectively.

The ages given by months for persons under 1 year of age are summarized as follows :

AGES.	Males	Females	Total
THE STATE.	17,953	17,935	35,888
1 month,	1,888	1,901	3,789
2 months,	1,881	1,884	3,765

10 months,	1,295	1,344	2,639
11 months,	789	813	1,602

The number of persons returned as being eleven months old is small as compared with the number given for the age preceding, a large part of the children between eleven months and one year of age undoubtedly having been called one year of age.

The fourth table of ages presents ages by periods of years for each county, city, and town, and for the State. A distribution of ages by periods of years is also given, for the State and counties, as regards color and race, and native and foreign born persons.

The distribution, by a further subdivision of years by periods, of the total number of persons 80 years of age and over is shown as follows :

PERIODS OF YEARS.	Males	Females	Total

95 to 99 years,	74	171	245
100 years and over,	9	34	43

The whole number of persons 100 years of age and over is 43, of which 9 are males and 34 females, the oldest person being 111 years of age.

An interesting question arises under the discussion of ages relative to the excess of females over males, so far as age is concerned, this excess, as has been shown, being 76,373, and its composition as to conjugal condition having been already analyzed.

In a brief table, this excess is distributed by age periods, as regards native and foreign born persons, as follows :

From this table it is seen that, of the whole population, 1,258,674 are from 15 to 60 years of age, generally denominated as the productive age, as against 1,045,917 in 1875, a gain of 212,757 over 1875, or 73.31 per cent of the whole gain in population. In this table the comparatively small number of persons for whom the age was returned as "unknown" are not considered. The totals for the State are given in the Census report for 1875, as 485,958, for persons under 15 years of age; 1,043,992, for persons from 15 to 60 years of age; and 111,660, for those above 60 years of age, instead of the verified totals as shown in the preceding table for the periods named.

RELATION TO HEAD OF FAMILY (page 445). This table exhibits the relationship which each person in the State bears to the head of the family in which he or she lives. This relationship is shown by sex for each county, city, and town. "Other relationships" are shown in detail for the State and counties only. The showing by age periods, as also a similar one for aliens, is for the State only.

In 1875 the relationship to head of family was shown only for those persons who had no occupation, or were not engaged in any employment, but were simply living at home. This, therefore, is the first time that the distribution of the whole population by relationship to the head of family has been given. Such tabulation has not been made under any Federal Census, although the question appeared on the population schedule for 1880.

From the general tables we learn that of the whole number of males, or 932,884, there are 356,380, or 38.20 per cent, who are heads of families, and of the 1,009,257 females in the State, 68,035, or 6.74 per cent of the whole number, are heads of families, making a total of 424,415 persons occupying the position as heads of families, this number constituting 21.85 per cent of the whole population.

Under conjugal condition we saw that the number of married males was 368,457; it is evident, therefore, that all the married males are not heads of families. Single, widowed, or divorced males are often heads of families, and many married males live with parents and other relatives, or as boarders.

There are 326,991 wives whose husbands are considered as heads of families, while there are 154 husbands whose wives are recognized as heads of families. There are 3,639 fathers and 12,647 mothers, of the heads of families, living with such heads. There are 398,152 sons, and 402,126 daughters, or a total of 800,278 sons and daughters living with their parents. These illustrations are sufficient to explain the facts brought together in a table, in which corresponding relationships for males and females are combined, as follows:

From this table a summary is drawn in which the relation to head of family is shown in a condensed form, comprehending heads of families, husbands and wives, those who are blood relatives or have legal relationships, and those who hold a relation to the head of the family by virtue only of residence or of employment, as follows:

DEGREES OF RELATIONSHIP.	MALES		FEMALES		AGGREGATES

In this table and in tables following in which degrees of relationship are shown, the designation of "legal relationships" includes those persons who are related to the head of family by marriage, adoption, etc.; the designation "by virtue of residence" includes boarders, lodgers, guests (hotel), patients, inmates, pupils, students, Shakers, religious associates, and visitors; the designation "by virtue of employment" includes domestic and personal servants, superintendents and matrons, assistants, hired men and boys, companions, partners, soldiers, and sailors; while the totals for uncles and aunts, nephews and nieces, and cousins are divided equally, for want of an exact classification, between "blood relatives" and "legal relationships."

If we consider the results shown by this summary table, we find, as has been stated, that the heads of families constitute 21.85 per cent of the total population; that husbands and wives represent 16.84 per cent and blood relatives 45.27 per cent. The blood relatives number 879,158, of which 800,278 are sons and daughters, as shown in the preceding table, while those having legal relationships number 71,361, or 3.67 per cent of the total population. There are 167,020 persons, or 8.60 per cent, whose relation to the head of family is by virtue of residence and 72,725, or 3.75 per cent, by virtue of employment.

From the showing of relation to head of family, by age periods, in which distinction is made concerning native and foreign born persons, we find that of the male heads of families, 218,188 are native born, being 31.70 per cent of the whole number of native born males in the State. Of the whole number of male heads the foreign constitute 138,192, or 56.50 per cent of the whole number of foreign born males in the State. As was stated in the consideration of conjugal condition, foreign born persons are generally married or at a marriageable age when they come to this country and the percentage of foreign born persons who are heads of families would naturally exceed, therefore, the percentage of native born persons who are heads of families. If considered as regards native and foreign born persons 20 years of age and over this excess would largely disappear. The distribution of the native and foreign born for other features, also, so far as degree of relationship is concerned, is shown in the following table:

We have already shown the whole number of aliens in the Commonwealth, meaning by aliens, as has been stated, those males foreign born, 20 years of age and over, who have not been naturalized, or taken the rights and privileges of citizenship, to be 99,131. Of this number 58,406, or 58.92 per cent of the whole number of aliens, are heads of families and are really factors in the social structure, while taking no part in the political affairs of the Commonwealth.

The relation of aliens to head of family by degrees of relationship is shown as follows:

From the foregoing tables, showing relationship to the heads of families, one can ascertain the composition of the average family. From the table showing the number and average size of families, it was seen that the average size of the family in the whole Commonwealth is 4.58 persons, the whole number of families being 424,415.

The distribution of this 4.58 persons by degrees of relationship is shown in the following table:

The percentage in the foregoing table showing blood relatives (2.07) includes, of course, sons and daughters.

PLACE OF BIRTH (page 487). This is a long table showing the place of birth of each person in the State, by sex, for each county, city, and town, and for the whole State, giving for native born persons the number born in each State, or the territories, of the United States; and for foreign born persons the number born in each of the principal countries in the world. The totals for Massachusetts are subdivided as regards the number born in town named, that is, in the town in which enumerated; in other towns in the State, and for persons returned as being born simply in Massachusetts, without specification of the particular town. For the State and counties, also, a recapitulation is given by groups of states and countries in accordance with a classification, the details of which are given on page 489. Additional detail is given, so far as enumerated, for certain countries, as explained on the page just mentioned. A showing of place of birth is also given, for the State only, for the whole population distributed as regards age periods, together with a similar showing of place of birth by age periods for aliens.

The population of the Commonwealth, 1,942,141, is divided into 1,415,274 native born persons and 526,867 foreign born persons, a gain of 189,445 native born and 107,963 foreign born during the past decade.

The distribution by place of birth of the native and foreign born for 1885 is brought into comparison, so far as possible, with a like distribution for 1875, showing the increase or decrease in each case, all instances of decrease being marked with the minus (—) sign. A difference in the classification of foreign born, as regards countries, in 1875 and 1885 will account for certain of these decreases. The table follows:

By the foregoing table we find that of the native born, or 1,415,274, there were 1,117,440 born in Massachusetts, 700,813 having been born in the town in which they now live.

In the Census of 1885 the Canadians of English extraction are distinguished from the Canadian French, there being, as seen in the table, 64,503 Canadian French residing in Massachusetts. This is the first time the Census Office has been able to state the French Canadian population of Massachusetts. Nova Scotia contributes 40,839 to our population, while of persons born in New Brunswick there are 16,449. By reference to the foregoing table all such points are ascertained.

A table of percentages follows, showing by place of birth, for 1875 and 1885, percentages of total population, of total increase, and of total native and foreign born:

By this table it is learned that in 1885 the native born constituted 72.87 per cent of the whole population, as against 74.21 per cent in 1875, the increase in native born being 65.27 per cent of the total increase.

The foreign born constituted 27.13 per cent of the total population in 1885 as against 25.36 per cent in 1875, the foreign born supplying, therefore, 37.20 per cent of the total increase for the period. This shows that the foreign born have increased relatively since 1875, although in 1880, according to the Federal Census, the foreign born constituted but 24.87 per cent of the total population.

If we compare the increase of foreign born with the increase of persons of Massachusetts birth, for 1875 and 1885, we find that in 1875 the number of those of Massachusetts birth was 973,011; in 1885 it is 1,117,440, a gain of 144,429, or 14.84 per cent, from 1875 to 1885, as compared with a gain of 144,855, or 17.49 per cent, from 1865 to 1875. The foreign born in 1885 are 526,867 in number, as against 418,904 in 1875, a gain for the ten years of 107,963, or 25.77 per cent, the gain from 1865 to 1875 being 153,418, or 57.79 per cent. These figures show that in 1885 there is an increase of those of Massachusetts birth of 36,466 more than the increase of foreign born, while in 1875 the increase of foreign born was 8,563 more than the increase of those of Massachusetts birth.

Comparing the increase of foreign born with the increase of total native born, for the same period, we find that the number born in the United States, representing the total native born in Massachusetts, is 1,415,274, the number for 1875 being 1,225,829, or a gain in native born of 189,445 as compared with an increase of foreign born of 107,963. The total gain of native born is, therefore, 81,482 in excess of the total gain in foreign born, the total gain in population being, as stated, 290,229.

The whole population in 1885 is comprehended in the totals given for native and foreign born, whereas in 1875 there were 7,179 persons, for whom any information concerning their place of birth was unobtainable.

The increase in native and foreign born from 1865 to 1875 and from 1875 to 1885 is shown by countries in the following table:

If we consider the distribution of native and foreign born persons by periods of years, we have the following results:

NATIVE AND FOREIGN BORN.	AGE PERIODS				Age Unknown
	Under **10**	**10** to **13**	**14** to **19**	**20** and over	
THE STATE.	360,180	141,064	222,734	1,218,019	144

Foreign born,	22,774	14,025	45,040	444,971	57

Of the total number of native born persons 20 years of age and over, or 773,048, the males number 366,450 and the females 406,598. Of the total number of foreign born persons 20 years of age and over, or 444,971, the males number 206,192 and the females 238,779. The total number in this class, or 1,218,019, constitutes the people of voting age in the Commonwealth, of which 572,642 are males and 645,377 are females.

To ascertain the relation of the foreign born to the whole population, for the cities and manufacturing or principal towns in the Commonwealth, the following table has been compiled. This table shows, for the cities and towns represented, the total population and total foreign born for 1885, and the percentage of foreign born of the total population for 1875 and 1885, the column of percentages for 1875 being added merely for purposes of comparison. The towns considered, except in a very few cases, have 3,000 or more inhabitants.

The movement of population to and from Massachusetts cannot be shown by the State Census, except on one side; we can show the number of people living in Massachusetts who were born in any of the States, but we cannot show the number of people living in other States who were born in Massachusetts.

The following table, therefore, showing the number of people coming into Massachusetts from other States and going into other States from Massachusetts, is drawn from the Federal Censuses of 1870 and 1880:

As a matter of general interest, and at the suggestion of many persons, a table showing place of birth, relative to the city of Boston, has been compiled. It shows the complete composition of the population of the city so far as actual place of birth is concerned. In the analysis of foreign parentage in connection with the tables for parent nativity, a similar table is given for the city of Boston, the table on the next page, it being remembered, relating only to place of birth. By this table it is seen that of the total population of the city, or 390,393, there are 257,098 native born, or 65.86 per cent of the total population of the city, 200,481 having been born in Massachusetts, while 150,177 were born within the territory of Boston itself. The persons born in Massachusetts constitute 51.35 per cent of the total population and 77.98 per cent of the total native born in the city.

The New England States contribute 38,869 persons to the population of Boston, Maine alone furnishing 21,140. New Hampshire contributes 9,870; Vermont, 3,758; Rhode Island, 2,020, and Connecticut, 2,081, the other States in the Union sending 17,748 people. Of the total population, 133,295, or 34.14 per cent, are foreign born, 67,745, or 17.35 per cent of the total population and 50.82 per cent of the total foreign born, coming from Ireland. British America contributes 30,377; Germany, 8,810; England, 10,197; Scotland, 3,193; Italy, 2,378, and Sweden, 2,101.

The table shows the distribution and relative percentages more completely, as follows:

PARENT NATIVITY (page 577). This table shows parent nativity for the total population, and for native and foreign born males and females, for counties, cities, and towns, and for the State.

This is the first attempt in our State Census to present the facts relating to parent nativity. The Federal Census has returned kindred statistics. For purposes of comparison, we reproduce the results for the State, the abbreviations used being *n*, for native; *f*, for foreign, and *unk*, for unknown.

From this general table we draw a summarized form, in which is shown, by sex, the number of people having native parentage, foreign parentage, mixed parentage, and unknown parentage, as follows:

PARENT NATIVITY.	NATIVE BORN		FOREIGN BORN		Total Native Born	Total Foreign Born	Total Population
	Males	Females	Males	Females			
THE STATE.	688,284	726,990	244,600	282,267	1,415,274	526,867	1,942,141
Native parentage,	407,618	445,621	966	1,286	853,239	2,252	855,491
Foreign parentage,	198,238	204,955	239,700	276,976	403,193	516,676	919,869
Mixed parentage,	56,029	59,456	1,799	2,457	115,485	4,256	119,741
Unknown parentage,	26,399	16,958	2,135	1,548	43,357	3,683	47,040

In a second table the results, as shown in the table just given, for the total native born, total foreign born, and total population, are reduced to percentages, as follows:

PARENT NATIVITY.	PERCENTAGES		
	Of Total Native Born	Of Total Foreign Born	Of Total Population
THE STATE.	100.00	100.00	100.00
Native parentage,	60.29	0.43	44.05
Foreign parentage,	28.49	98.06	47.36
Mixed parentage,	8.16	0.81	6.17
Unknown parentage,	3.06	0.70	2.42

From these two tables we find that 855,491, or 44.05 per cent of the total population, are of native parentage, that is, have both parents native born. Of the whole number of persons having native parentage, 853,239 are native born persons themselves, while 2,252 are foreign born persons. These 2,252 persons, representing $\frac{43}{100}$ of one per cent of the total foreign born, were either born abroad or at sea while their parents who were native born were travelling or residing temporarily out of the country. The place of birth of these persons is given in the tables showing place of birth as either American citizens born abroad, of which there are 3,611 in the whole State, or as being born at sea, the number of persons so returned being 361. The persons last named, however, may have had either native or foreign born parents.

In the showing of place of birth, the number of persons given as American citizens born abroad is 3,611, as we have just stated, while the whole number of persons of foreign birth who have native parents is only 2,252, an excess of 1,359 persons born abroad. The parent nativity for this excess of persons is comprehended by the total number of persons of foreign birth having either native born fathers and foreign born mothers, or native born fathers and unknown place of birth for mothers, a certain part of the total number of such persons having been returned as American citizens born abroad.

Considering persons of foreign parentage, we find that they represent a total of 919,869 persons, of which number 403,193 are native born and 516,676 of foreign birth. The native born persons having such foreign parentage, that is, both parents foreign born, constitute 28.49 per cent of the total native born persons, while the 516,676 persons having purely foreign parentage are 98.06 per cent of the whole number of foreign born persons, the remaining 1.94 per cent of persons of foreign birth having either native, mixed, or unknown parentage, as shown in the table. The whole number of persons, without regard to the distribution by native or foreign born, who have both parents foreign is 919,869, or 47.36 per cent of the total population of the State. If to this percentage we add the percentage of total population represented by 119,741 persons of mixed parentage, that is, persons having one parent native born and one parent foreign born, or 6.17 per cent, we find that of the whole number of persons in the State 53.53 per cent have one or both parents foreign born. There are 47,040 persons, or 2.42 per cent of the whole population, of unknown parentage, that is, for whom no information was returned as regards the place of birth of either one or both parents.

There are 68 cities and towns in the Commonwealth in which there is an excess of persons having foreign parentage. These cities and towns have a population of 1,132,038, or 58.29 per cent of the total population of the State, while the remaining 280 towns, in which there is an excess of persons of native born parentage, represent a population of 810,103, or 41.71 per cent of the whole population. The details for these 68 cities and towns are shown as follows:

The population of the city of Boston has been analyzed, so far as place of birth is concerned, in that part of the analysis devoted to the consideration of that subject. Information concerning the population of the city of Boston as regards parent nativity becomes of comparative value, therefore, and is shown in two tables, the second table giving percentages only of total native born, of total foreign born, and of total population. The tables follow :

The total population of the city of Boston, or 390,393 persons, includes 121,720 native born persons of native parentage, which is 47.34 per cent of the whole number of native born persons in the city, while there are 503 foreign born persons of native parentage. Of the whole number of persons having foreign parentage, 102,786, or 39.98 per cent of the total native born, are of native birth, that is, were born in this country. The total number of foreign born persons having foreign parentage is 130,896, or 98.20 per cent of the total foreign born, making a total of 233,682 persons, or 59.86 per cent of the total population of the city, having foreign parentage. The persons of native parentage represent 31.31 per cent of the total population, and persons of mixed and unknown parentage 7.16 and 1.67 per cent, respectively.

PARENT NATIVITY : BY STATES AND COUNTRIES (page 605). This is a table which shows parent nativity in detail by states and countries, as regards native and foreign born males and females, and for both sexes, for each county, city, and town, and for the State, and we derive therefrom a subsidiary table showing the place of birth of the fathers and mothers of the people of the Commonwealth. The subsidiary table follows :

This table, as has been said, is drawn from the table on parent nativity, with the exception of the first column showing total persons, which is taken from a previous table on place of birth. The results for total persons, in this column, have no particular relation to the results shown in the columns under the designations of fathers and mothers, but have been brought forward to show, for each designation of place of birth, the total persons in the Commonwealth of such birth as compared with the results shown for fathers and mothers. For instance, the total persons born in Massachusetts is 1,117,440; the total number of persons in Massachusetts who are native born, that is, born in this country anywhere, whose fathers were born in Massachusetts is 567,099. The total number of foreign born persons, whose fathers were born in Massachusetts, is 1,534. These are persons who were born at sea or in foreign countries while their parents were travelling or abroad. The total number of people then in Massachusetts, both native and foreign born, whose fathers were born in Massachusetts, is 568,633.

To illustrate further, taking a foreign country, as Ireland, for instance, we find, as shown in the first column, that there are 244,629 persons born in Ireland who are living in Massachusetts. For fathers, we find that there are 291,932 people born in Massachusetts, or other parts of the United States, whose fathers were born in Ireland, and that there are 264,903 people of foreign birth, that is, born in Ireland, Great Britain, or somewhere else out of the United States, whose fathers were born in Ireland. This makes a total of 556,835 people in Massachusetts, who were born either in this country, in Ireland, or some other foreign country, whose fathers were born in Ireland.

Analyzing the figures shown in the table as regards mothers we find similar results. For Massachusetts, for instance, there are 576,597 persons in the State, whose mothers were born in Massachusetts; of this number of persons 575,092 are native born persons and 1,505 foreign born persons. Of the whole number of persons having mothers born in Ireland, or 556,952 persons, 293,245 are native born, that is, born in this country, while 263,707 are foreign born. The total number of persons having fathers born in Ireland is almost exactly the same as for persons having mothers born in that country. For Great Britain, there are 132,333 persons in Massachusetts having fathers born somewhere in Great Britain and 119,804 persons whose mothers were born in Great Britain.

These illustrations sufficiently explain the use of the table, which at first glance may seem somewhat complex.

The facts in the foregoing table as regards total persons, total fathers, and total mothers are reduced to percentages, as follows:

In figuring the percentages shown in this table, the number of fathers and mothers whose place of birth is given in the first table as "unknown" have not been considered.

Considering the percentages shown in this table, we find that although 72.87 per cent of the total persons are native born, but 48.05 per cent of the total fathers and 48.89 per cent of the total mothers are native born. The total persons born in Massachusetts represent 57.54 per cent of the total population, but the fathers born in Massachusetts represent only 29.87 per cent of the total fathers and the mothers born in Massachusetts but 30.28 per cent of the total mothers. Analyzing the percentages for foreign born, we find that the foreign born persons constitute 27.13 per cent of the total persons, while the foreign born fathers constitute 51.95 per cent of the total fathers and the foreign born mothers 51.11 per cent of the total mothers.

Applying the same forms of analysis for fathers and mothers to the population of the city of Boston, similar tables may be presented. A table showing place of birth of fathers and mothers is, therefore, first presented, as follows:

In figuring the percentages shown in this second table for the city of Boston, the number of fathers and mothers whose place of birth is given in the first table as "unknown" has not been considered.

The percentages for Boston may be briefly summarized. The native born persons constitute 65.86 per cent of the total persons, while the native born fathers constitute 34.99 per cent of the total fathers and the native born mothers 36.10 per cent of the total mothers. The number of persons born in Massachusetts represent 51.35 per cent of the total persons, the fathers of Massachusetts birth 17.75 per cent of the total fathers, and the mothers of Massachusetts birth 19.10 per cent of the total mothers. The foreign born persons are 34.14 per cent of the total population of the city, but the foreign born fathers represent 65.01 per cent of the total fathers and the foreign born mothers 63.90 per cent of the total mothers. The persons born in Ireland constitute 17.35 per cent of the total persons, the fathers born in Ireland 39.56 per cent of the total fathers, and the mothers born in Ireland 39.41 per cent of the total mothers.

The question of intermarriage between persons of native and foreign birth has never been brought out in any Census in this country, but from the tables on parent nativity we are able to make an analytical table for fathers, and one for mothers, showing such intermarriage. The population being 1,942,141, there must have been that number of fathers, and the same number of mothers. The table for fathers follows :

Place of Birth —		Number of Fathers
Father	Mother	
	The State.	1,942,141
Massachusetts,	Massachusetts,	449,140
	Other Native Born,	83,013

	Other Native Born,	2,479
	Foreign Born,	1,381
	Unknown,	29,398
	Total,	38,617

There are 568,633 persons in the State whose fathers were born in Massachusetts. Of this number of fathers, 449,140 married Massachusetts born women; 83,013 married women born in other parts of the United States, while 31,442 married foreign born women. There are 346,081 persons who had fathers born in other parts of the United States than Massachusetts, these fathers marrying 79,450 Massachusetts born women, 243,888 women born in other parts of the United States, and 20,643 foreign born women. There are 988,810 persons whose fathers are foreign born. Of these foreign born fathers 42,648 married women born in Massachusetts; 25,008 married women born in other parts of the United States, while 919,869 married foreign born women.

Similar facts as regards intermarriage for mothers are, also, shown. There are 576,597 persons having Massachusetts born mothers, these mothers having married 449,140 men of Massachusetts birth, 79,450 men born in other parts of the United States, and 42,648 men of foreign birth. Of the mothers born in other parts of the United States than Massachusetts, that is, the mothers of 354,388 persons, 83,013 married Massachusetts born men; 243,888 married men born in other parts of the United States, and 25,008 married foreign born men. Other points concerning the intermarriage of mothers are shown in the table which follows:

PLACE OF BIRTH AND PARENT NATIVITY OF PERSONS 90 YEARS OF AGE AND OVER. FOR THE STATE (page 679). The facts under this designation are given in two tables showing by sex and by totals, for the State only, place of birth and parent nativity separately for the number of persons of each age from 90 years to 111 years both inclusive, in the first table, and parent nativity as regards place of birth for the whole number of persons of 90 years of age and over, without regard to the details by years, in the second table. The persons 90 years of age and over represent less than one-tenth of one per cent of the total population of the State, or, as regards sex, of the total number of males or females, the exact figures being $\frac{4}{100}$ of one per cent for males; $\frac{9}{100}$ of one per cent for females, and $\frac{7}{100}$ of one per cent for both sexes.

The persons represented by the tables of longevity just described number 382 males and 922 females, or a total of 1,304 persons in the State who are 90 years of age and over. The males represent, therefore, 29.29 per cent and the females 70.71 per cent, respectively, of the total number of persons 90 years of age and over.

The material features for these persons, as set forth in the tables, are briefly summarized. The first table which we present shows place of birth, as follows:

In a second table the results for parent nativity as regards the persons under consideration are shown as follows:

PARENT NATIVITY.	NATIVE BORN		FOREIGN BORN		Total Native Born	Total Foreign Born	Total Persons
	Males	Females	Males	Females			
THE STATE.	288	693	94	229	981	323	1,304

Mixed parentage, . .	6	11	1	2	17	3	20
Unknown parentage, . .	28	59	1	9	87	10	97

From the preceding table we draw percentages, as follows:

PARENT NATIVITY.	PERCENTAGES		
	Of Total Native Born	Of Total Foreign Born	Of Total Persons
THE STATE.	100.00	100.00	100.00
Native parentage, ...	88.99	0.31	67.03
Foreign parentage, ...	0.41	95.66	24.00
Mixed parentage, ...	1.73	0.93	1.53
Unknown parentage, ...	8.87	3.10	7.44

From these tables concerning persons 90 years of age and over, we find as regards place of birth that 981, or 75.23 per cent of the whole number, are native born, and 323, or 24.77 per cent, are foreign born. Of the native born, 757 were born in Massachusetts, 187 in the other New England States, and 37 in other States. Of the foreign born, 244 were born in Ireland. As regards parent nativity, 874, or 67.03 per cent of the total number, have native parentage; 313, or 24.00 per cent, have foreign parentage; 20, or 1.53 per cent, have mixed parentage, while for 97, or 7.44 per cent of the whole number, the place of birth of one or both parents was not returned.

The general results for the State, as shown in the analytical tables, it is assumed are in such form as to be easily grasped. In addition, subsidiary tables have been made, which bring out the salient features of the Census of the people, so far as comprehended by the tabular presentations contained in Part 1. In all cases where similar statistics were shown in 1875, a comparison has been made in the analysis with the results for that year.

Reference has been made, in the analyses preceding, to several presentations included in this Part which have not been given in previous Censuses. It should be borne in mind that in nearly all the presentations for 1885 the work of preparation has been largely increased over that of 1875 by the introduction of subdivisions in tabulations, the results being correspondingly more minute and of much greater value. Many aggregations occupying but a small space in print have necessitated a complete tabulation of the details of such facts for every town and city in the State, requiring, therefore, as much actual labor as would be needed for a complete presentation in print by towns and cities.

To make a complete analysis of the various tables in this Part would require a work of considerable size. We have only aimed to bring out in summaries and combinations of tables those features which a casual examiner would expect to find pointed out for him, and indicate a study which might be made of the facts presented. Much has been added to what has been given in previous Census analyses in the way of percentages and results of general utility, so that one examining the Census volumes may find already done for him those things which are most needed.

VILLAGES: ALPHABETICALLY.

VILLAGES: ALPHABETICALLY.

[In the following list of villages, the sections of a town, as East, North, South, and West, are given alphabetically under the town name itself; all other divisions alphabetically according to particular designation of district, village, railroad station, or post office. In the second column, "Town and County," the county name follows, in italics, the name of the town. This list has been compiled from various sources, and has been submitted to the clerk of each city or town for revision.]

[† Of the total decrease in population since 1875, or 34,675, for 153 towns, 12,809, or 36.94 per cent, is directly due to loss of territory caused by the division of existing towns and the incorporation of new towns, as follows:— Sandwich loses 1,293 to Bourne; Adams, 7,477 to North Adams; Edgartown, 542 to Cottage City; Wilbraham, 852 to Hampden; Medway, 683 (a part only of its total loss) to Millis; and Needham, 1,962 to Wellesley. If the towns named had remained intact, all but Medway would have shown an increase in population, representing in the aggregate 6,367, or 22.73 per cent, over their population in 1875, while Medway would have shown a decrease in population of 782, or 18.43 per cent. Assuming, then, that, with the exception of Medway, the entire loss in these towns is apparent only, the actual decrease in population for 148 towns is found to be 21,866, or 9.40 per cent of their population in 1875. By special arrangement, the Census returns for the town of Amesbury in 1875 were divided, and the results for Merrimac, although not incorporated as a town until April 11, 1876, were presented separately.]

CENSUSES OF POPULATION:

1765 TO 1885.

BY TOWNS.

CENSUSES OF POPULATION — 1765-1885.

In the following table of "Censuses of Population," reference marks are used as follows:

The asterisk (*) following the name of a town or city indicates changes in population due to the incorporation of new towns, changes in area, boundaries, etc., since 1875.

The dagger (†) preceding the date of incorporation indicates the use of a date which shows for the town named either its original incorporation as a plantation or district, or its incorporation as a town under a different name, which name was subsequently changed by an Act of the Legislature to its present designation. In certain cases, a further act of incorporation as a distinct town at a later date is reported, in addition to the Act making it a plantation or district. In other instances, however, no other act of incorporation is given, as by an Act of August 23, 1775, all places incorporated originally by the name of districts were "declared to be towns, to every intent and purpose whatsoever."

The double dagger (‡) preceding the date of incorporation indicates for the town named that the date of incorporation is subsequent to the date of the earliest Census in which population appears. This is due, probably, to the fact that the territory in question was well defined and recognized in Census enumerations prior to the date of its formal incorporation as a district or town. In the case of the town of Merrimac, which is so marked, by special arrangement the Census returns for the town of Amesbury, of which it constituted a part at the time of the taking of the State Census in 1875, were divided after the enumeration was completed and the results for Merrimac, which was made a town in 1876, were presented separately.

The section mark (§) following the name of a district or place indicates districts, gores, or unincorporated tracts of land, towns, etc., which have been ceded to other States, or annexed to existing towns and cities in this State and have ceased, therefore, to have a separate corporate existence.

The towns and districts which were ceded to other States are as follows: — *Boston Corner*, ceded to the State of New York in 1853, and *Pawtucket*, by a change in boundary line, annexed in 1861 to the State of Rhode Island.

The *gores, etc.*, for which population is given in 1790, and a tract of land designated as "No-town," for which population is given in 1830, are as follows: — For 1790, in Berkshire county, gore adjoining Adams and Windsor, 425; gore adjoining Williamstown, 51; total population, as printed, 476; in Worcester county, gore adjoining Oxford, 237; gore adjoining Sturbridge, 64; gore adjoining Leominster, 27; gore adjoining Fitchburg, 14; gore adjoining Princeton, 26; total population, as printed, 368; and for 1830, in Worcester county, No-town, 69.

The cities and towns which have become a part of the city of Boston by annexation are as follows: — *Brighton*, in 1873; *Charlestown* (a city), in 1873; *Dorchester*, in 1869; *Roxbury* (a city), in 1867; and *West Roxbury*, in 1873.

The changes in territory and population indicated by the use of these reference marks are fully explained in the "NOTES," on page 83.

In the totals for the counties of Franklin, Hampden, and Norfolk, population appears prior to their incorporation as counties, it being the intention, however, to show only, in the aggregate, the relative progress of the towns as at present constituted as regards the division into the respective counties.

The colonial censuses of 1765 and 1776 have been taken from an abstract of the State Census for 1865, in which they were reproduced, with corrections, from printed and manuscript returns, which appeared to be the only authentic records of these censuses in existence. For certain towns, for which no returns seem to have been made, the population has been supplied from the next succeeding census in which returns for these towns are reported, the figures in all such cases being enclosed in brackets.

The returns for 1765 do not include Indians, of which there were 1,569 in the State, while the returns for 1776 present details by towns for white persons only, 4,761 colored population not being included in the totals for the State.

The distribution by counties of the Indians in 1765 was as follows: — Barnstable, 515 (of which 230 were in Mashpee); Berkshire, 221 (in Stockbridge); Bristol, 167 (principally in Dartmouth and Freetown); Dukes, 313 (of which 188 were in Chilmark); Middlesex, 37 (in Natick); Nantucket, 93; Plymouth, 223; total, 1,569.

The colored population, in 1776, was divided by counties, as follows: — Barnstable, 171; Berkshire, 216; Bristol, 585; Dukes, 59; Essex, 1,049; Franklin, Hampden, and Hampshire (one county), 245; Middlesex, 702; Nantucket, 133; Plymouth, 487; Norfolk and Suffolk (one county), 682; Worcester, 432; total, 4,761.

NOTES.

DATES OF INCORPORATION, CHANGES IN NAME, AREA, BOUNDARIES, POPULATION, ETC., OF COUNTIES, CITIES, AND TOWNS.

NOTES

On the Incorporation of Counties, Cities, and Towns; Gain or Loss in Population, with causes for same, etc.; Changes in Town Names, Area, Boundaries, etc.

[The dates of incorporation immediately follow, in parenthesis, the name of the county, city, town, or district. Information is also supplied concerning changes in names, boundary lines, etc., since the date of original incorporation. These dates, etc., were taken originally from an abstract of the United States Census of 1860, prepared under the direction of the Secretary of the Commonwealth. Changes in area, boundaries, etc., and the incorporation of new towns and cities subsequent to 1860 have been supplied from official sources.

The date of incorporation following the name of a city, town, or district, unless otherwise designated, represents the incorporation either as a district or town. Those marked with the dagger (†) are dates of original incorporation as a district only. By the Act of August 23, 1775, however, all places incorporated originally by the name of districts were "declared to be towns, to every intent and purpose whatsoever."

The gain or loss in population for 1885, *as compared with the population for 1875*, is given for each county, city, and town, in brackets, and indicates the gain or loss in number, together with all material percentages of increase or decrease. The causes which have tended to increase or decrease the population of a town have been very generally returned by the Census Enumerators, and are appended.]

Truro (Oct 29, 1705; reincorporated, July 16, 1709). — Boundary line between Truro and Wellfleet established, Feb. 22, 1837. See *Provincetown*. [Loss 126, or 11.48 per cent, on 1,098.] Depression in the fisheries; during the last two years, however, the weir fishing has added life to the town and has tended to increase the population.

Wellfleet (June 16, 1763 †). — North Precinct of Eastham. See *Truro*. [Loss 301, or 15.14 per cent, on 1,988.] Due to the failure to get a living on the part of the men engaged in mackerel fishing, and young men, as a consequence, leaving the town for employment.

SIZE OF FAMILIES.

SIZE OF FAMILIES.

The distribution of the total number of families, by exact size, for each county, city, ward, and town, and for the State, is shown in the three tables here presented.

The first table shows the number of families, by counties, cities, wards, and towns, for each size from 1 to 23 persons and over, with a Recapitulation for the State.

The second table gives in detail by exact size for each town and ward the number of families for the sizes represented by "23 and over" in the first table.

The third table shows, by counties and for the State, the number and size of families, together with the population represented by each size. A Recapitulation for the State also follows showing the number and population of families by classified sizes.

The second table locates the presence in certain towns of large aggregations of people in hotels, boarding and lodging houses, hospitals, charitable and reformatory institutions, etc., these being counted for Census purposes as families. It also explains the excessively large average size of family for these towns, as given in the table on pages 115–120, *ante*.

For the distribution of families on the basis of families to the square mile and number of acres to the family, see the Recapitulation for the State under the heading "DWELLING-HOUSES," on pages 180 and 181, *post*.

AGES.

AGES.

The classification of ages by years and periods of years is shown in four tables, giving the number of persons, by sex and by totals, for each year and period of years respectively, and for those less than one year old by months, in each town, city, county, and for the State. The tables are self-explanatory and are designated as follows:

- Ages: Under 1 to 80 Years and Over.
- Ages: Under 1 Year, in Detail by Months.
- Ages: 80 Years and Over, in Detail.
- Ages: By Periods of Years.

The showing by periods of years will be found especially convenient, and by its use in connection with the tables preceding which give ages in detail by years any combination of ages desired can be easily obtained. For instance, if it be desired to ascertain the number of males in any town from 16 to 40 years inclusive, it is only necessary to add to the number reported for the periods marked "20 to 29" and "30 to 39", in the showing by periods of years, the number of males who are 16, 17, 18, 19, and 40 years respectively, as reported in the first table which gives years in detail.

In addition to the usual Recapitulation for the showing by periods of years, a second is added, in which is presented for the State and Counties the details by periods of years for color and race and for native and foreign born persons.

RELATION TO HEAD OF FAMILY.

RELATION TO HEAD OF FAMILY.

The table following shows, by sex, for each county, city, and town, and for the State, the number of heads of families and the relation of each person in the family to the head of the family. As, for Census purposes, the family includes all collections, large or small, of people associated together and living under a common roof, the table shows, in addition to blood relatives and those having legal relationship (by marriage, adoption, etc.), the number of boarders, lodgers, and guests (in hotels); the number of patients in hospitals and inmates of other institutions; the number of pupils (in boarding schools) and students (in colleges) residing in school or college buildings; the number of domestic and personal servants, stewards, housekeepers, and companions, whether serving in private families, in hotels, boarding or lodging houses, or in institutions; the number of superintendents, matrons, and assistants in schools, colleges, and institutions; the number of hired men and boys who reside with the head of family by whom they are employed but for whom they do not render domestic service; the number of visitors not residing permanently in the families in which they were enumerated; the number of persons whose relation to the head of family is not specified, and the number of persons who have other relationships, not designated for each town and city, but which are shown in detail, for the State and counties, on pages 480 and 481, *post*.

Boarders comprise those persons who sleep and board in one place, and include regular boarders at small hotels in towns and cities; lodgers, those persons who room in one place and board in another; guests (in hotels), those persons residing temporarily in the smaller hotels, and guests generally in hotels in Boston and the larger cities.

The distinction between patients in hospitals for treatment and inmates of institutions has been observed, so far as possible, in accordance with the returns of the Enumerators. There are, undoubtedly, persons included with inmates who should be classed properly with patients, but the exact number of such persons is not easily determined. For general purposes, however, it is sufficient to consider patients as inmates of institutions, the hospital having the same characteristics, as apart from the ordinary place of abode. Inmates include paupers and homeless children in almshouses or in families when boarded by the town, such persons having no other relation to the head of the family. This often happens in small towns which do not maintain almshouses. Under this designation are included, also, inmates of penal and reformatory institutions, public or private charitable institutions, homes for various classes, and other institutions.

In the case of scholars residing in buildings belonging to or considered as a part of an educational institution, an effort has been made to distinguish the pupil in the boarding school from the student in college. Assistants comprehend assistant teachers in schools and colleges, assistant matrons, nurses, and attendants in hospitals, and, in institutions, officials connected with the administration of its affairs, those persons who are occupied in the purely domestic branch of the service being classed as servants, housekeepers, or stewards, as the case may be.

Superintendents and matrons represent persons holding such relation in institutions, of which the chief officer has been taken as the head of the family. The designation of warden, which appears in the classification of males for towns, is omitted from the showing for the State and counties, no such relation appearing for any town, the warden being considered always as the nominal head of the family.

The designations of "hired men" and "hired boys" were adopted by the Census office to exclude from that class of persons whose relation to the head of the family should be returned properly as that of servant, a very large body of people usually found in farming districts, whose *occupation* is that of farm laborer, and who usually reside in the family of the person by whom they are employed. In many instances, the relation to the head of the family of such persons was originally returned as that of servant, and has been changed, therefore, wherever evident, to that of hired man, in the case of adults, and to hired boy, in the case of young persons. In other instances, where "farm laborer" is given as the occupation of the person and "boarder" as the relation to the head of family, the distinction as to hired man cannot be determined, and no change, in such cases, has been made. Apparent discrepancies in the relative number of hired men and boys reported for certain towns, as compared with other towns, are due, therefore, to the causes named.

In the showing of "other relationships," in detail, "partners" comprise persons associated in business and living together; "religious associates," members of religious sects living under a common roof, and "convicts' daughters," the children presumably of female convicts living in the prison or workhouse with their parents, although not themselves convicts. Relations by adoption and "step" relations by marriage, as designated in the table, would seem to imply the act of adoption or second marriage on the part of the head of the family concerning whom such relation has been returned, but not necessarily so. For instance, "adopted father" does not show the adoption by the head of a family of a person for a father, but indicates rather that the father (by his own act of adoption) is living with an adopted son, who is the head of the family. In the same way, a "step-mother-in-law" bears that relation to the head of the family by reason of the marriage of her step-son or step-daughter with the head of the family with whom she resides. Relations of a like nature may be similarly explained.

The relation to the head of family of the whole number of males and females, classified as to native and foreign born, and the relation to the head of family of aliens, are shown by age periods, for the State only, on pages 482–485, *post*.

* Aliens include all male persons, of foreign birth, 21 years of age and over, who have not been naturalized. No persons under 21 years of age, therefore, are comprehended by the age period, "20 to 29."

PLACE OF BIRTH.

PLACE OF BIRTH.

The distribution of the people by place of birth is shown in the table following, giving, by sex, for each county, city, and town, and for the State, the number born in each State or in the Territories, for native born persons, and the number born in each of the principal foreign countries, for foreign born persons.

Of the persons born in Massachusetts, the number is given respectively for those born in the town in which enumerated; for those born in other towns in the State, and for those concerning whom this distinction is not specified and for whom the place of birth is returned simply as "Massachusetts."

For persons born in Canada, the results are subdivided, showing the number of persons born in Canada of French and English extraction respectively.

The italic letters, *n. s.*, following "United States" and "British America," are an abbreviation of the words, "not specified."

In the showing of place of birth, for the State and counties, additional detail is given, so far as enumerated, for Austria, Germany, Portugal, and South America. The designation of "Other Foreign Countries" is subdivided, also, showing the number of American citizens born abroad and the number of persons who were born at sea, apart from the number of persons who were born in reality in foreign countries not designated in the table. In the showing by towns, these figures are not presented separately, but given in one total as "Other Foreign Countries."

A recapitulation by groups is included, also, in the presentation for the State and counties, comprehending the following classification of the several States and countries for which place of birth is shown:

Native Born. — North Atlantic States (Massachusetts, Maine, New Hampshire, Vermont, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania); South Atlantic States (Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida); Northern Central States (Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Kansas, and Nebraska); Southern Central States (Kentucky, Tennessee, Arkansas, Alabama, Mississippi, Louisiana, and Texas); Western States (Colorado, California, Oregon, and Nevada); The Territories (including Alaska); and United States, not specified.

Foreign Born. — Asia (Asia, *n. s.*, China, and Japan); British America (British America, *n. s.*, Canada (English), Canada (French), New Brunswick, Newfoundland, Nova Scotia, and Prince Edward Island); Other British Possessions; Central America; Cuba and West Indies; Europe, excepting Great Britain and Ireland (Austria, Belgium, Denmark, France, Germany, Greece, Holland, Italy, Norway, Poland, Portugal, not including Western Islands, Russia, Spain, Sweden, Switzerland, and Turkey); Great Britain (England, Scotland, and Wales); Ireland; Mexico; Sandwich Islands; South America; Western Islands; American citizens born abroad; persons born at sea; and foreign countries, not specified.

The grouping of States is in accordance with a classification used in the presentation of results for the Tenth Census of the United States in 1880. Under North Atlantic States, a further subdivision of States is made, as follows: — Massachusetts; Other New England States, comprising Maine, New Hampshire, Vermont, Rhode Island, and Connecticut; and Other North Atlantic States, comprising New York, New Jersey, and Pennsylvania.

A showing of place of birth, by age periods, for the whole population and for aliens, is given, for the State only, on pages 572–576, *post*.

* Aliens include all male persons, of foreign birth, 21 years of age and over, who have not been naturalized. No persons under 21 years of age, therefore, are comprehended by the age period, "20 to 29."

PARENT NATIVITY.

PARENT NATIVITY.

Parent nativity is shown in the following table, in a brief form, for the population, subdivided as to native and foreign born males and females, for each county, city, and town, and for the State.

The abbreviation of the words, "native," "foreign," and "unknown," as regards the nativity of the parent, is denoted by the use of italics, as follows: — *n*, for native; *f*, for foreign; *unk*, for unknown. These abbreviations when used in conjunction with the words, "both parents," show, for the persons represented, that they are of purely native or purely foreign parentage, or that the place of birth of both parents is unknown. When used in conjunction with the words, "father" or "mother," these abbreviations show, for example, that the father is native and the mother foreign born, as "Father, *n*, mother, *f*," or that the father is foreign born and the place of birth of the mother unknown, as "Father, *f*, mother, *unk;*" other designations may be read in like manner.

The whole number of designations used in the table to indicate parent nativity are as follows:

Both parents, *n;*
Father, *n*, mother, *f;*
Father, *n*, mother, *unk;*
Father, *f*, mother, *n;*
Both parents, *f;*
Father, *f*, mother, *unk;*
Father, *unk*, mother, *n;*
Father, *unk*, mother, *f;*
Both parents, *unk.*

If persons of native parentage were born abroad or at sea, while their parents were travelling or residing out of the country temporarily, they are classed necessarily as "foreign born." In the showing of place of birth, for the State and counties, on pages 564–571, *ante*, these persons are accounted for, under "Foreign Born," as being either American citizens born abroad or persons born at sea; the persons last named, however, may have either native or foreign parentage. The difference in the totals returned for American citizens born abroad, in the showing for place of birth, and the total number of persons of foreign birth having native parents, in the table showing parent nativity, is explained, in part, by the number of foreign born persons returned with native fathers and foreign mothers or native fathers and unknown place of birth for mothers, a certain portion of the total number of such persons having been returned as American citizens born abroad. The relation of these figures is further considered in the "ANALYSIS" for this volume.

In the showing for the State and counties, on page 603, *post*, and in the second column of page 598, *post*, "father" is abbreviated to "fa.;" "mother" to "mo.," and, when necessary, "both parents" to "both pa.," for want of space.

PARENT NATIVITY.

[Parent nativity is denoted by the use of italic abbreviations, as follows: — *n*, native; *f*, foreign; *unk*, unknown. See explanation on page 579, *ante*.]

NOTE.—In order to present the results for the State and counties, "father" is abbreviated to "fa."; "mother" to "mo.," and, when necessary, "both parents" to "both pa."

PARENT NATIVITY:
BY STATES AND COUNTRIES.

PARENT NATIVITY: BY STATES AND COUNTRIES.

The following table gives parent nativity in detail by states and countries, showing the place of birth of the father and of the mother for each person in the State. The persons for whom such parent nativity is shown are subdivided as regards native and foreign born males and females, with totals only for both sexes, for each county, city, and town, and for the State.

The designations used in the table to denote the respective states and countries are as follows:

Mass., for Massachusetts; N. E., for other New England States; O. S., for Other States, including the Territories and United States, not specified; Ire., for Ireland; C. E., for Canada (English); C. F., for Canada (French); G. B., for Great Britain; B. P., for British Possessions, not otherwise specified; Ger., for Germany; Fr., for France; It, for Italy; O. C., for Other Countries; and Unk., for Unknown.

In addition to the combinations of parent nativity which are given in detail for towns, in accordance with the above classification of states and countries, other combinations representing parent nativity for a few persons only have been consolidated, the place of birth of the parents being given in the table simply as native, foreign, or unknown, without designating the particular states or countries. In such cases, abbreviations are used, as follows: — nat., for native; for., for foreign; and unk., for unknown, being presented in combination either as Nat. — Nat.; Nat. — For.; Nat. — Unk.; For. — Nat.; For. — For.; For. — Unk.; Unk. — Nat.; or Unk. — For., as the case may be, the first designation relating always to the father, and the second to the mother.

Wherever the designation of "Other Countries" (O. C.) appears for towns, foot-notes are used indicating the principal countries represented, in the order of their relative importance, whenever the results for "other countries" are not too widely scattered. For the State and counties, the information contained in these foot-notes is not repeated.

In the showing for the State, all combinations of parent nativity, however unimportant, are given in detail, and, in addition, the detail of the respective countries comprehended by the designations of "Great Britain" (G. B.) and "British Possessions" (B. P.), used in the showing for counties, cities, and towns.

The use of the table may be illustrated, as follows: — In the town of Barnstable, on page 609, line 2, we find that, out of a total population of 4,050, the place of birth of both parents for 2,988 persons is given as "Mass." Of this number of persons having such native parentage, 1,426 are native born males; 1,561, native born females, and 1, a foreign born male with native parents. In the same way, we find, for instance, on line 5, that for 20 persons, of whom 13 are native males and 7 are native females, the place of birth of the father is given as "Mass.," and that of the mother as "B. P." Again, on line 14, we find that of the 153 persons for whom the place of birth of both parents is given as "Ire.," 33 are native born males; 25, foreign born males; 43, native born females, and 52, foreign born females, respectively.

PLACE OF BIRTH AND PARENT NATIVITY

OF PERSONS

90 YEARS OF AGE AND OVER.

FOR THE STATE.

PLACE OF BIRTH AND PARENT NATIVITY OF PERSONS 90 YEARS OF AGE AND OVER.

The two tables following give, for the State only, the details of place of birth and parent nativity, by sex and by totals, for persons 90 years of age and over.

The first table presents separately place of birth and parent nativity for the total number of persons of each age, from 90 years to 111 years inclusive, while the second table shows parent nativity as regards place of birth for the whole number of persons 90 years of age and over, without regard to the detail by years.

In these tables, parent nativity is given in brief form, as in the table of parent nativity on pages 577-604, *ante*, and place of birth as regards the number born in Massachusetts, other New England States, or other States, for native born persons, and as regards the number born in Ireland, Canada (divided into Canada (English) or Canada (French) according as the persons are of English or French extraction), England, Nova Scotia, Germany, Scotland, or other foreign countries, for foreign born persons.

The distribution by counties, cities, and towns of persons 90 years of age and over, as regards specific ages, is shown under "AGES," in the table designated as "Ages: 80 years and over, in detail," on pages 388-413, *ante*.
